The Common Curriculum Framework for K–9 MATHEMATICS
ACKNOWLEDGEMENTS

The Common Curriculum Framework for K–9 Mathematics was developed through the cooperative efforts of the four western provinces and three territories. These jurisdictions would like to acknowledge the following mathematics consultants.

**Alberta**
- Vivian Abboud  
  Alberta Education, French Language Services Branch
- Richard DeMerchant  
  Alberta Education, Curriculum Branch
- Jennifer Dolecki  
  Alberta Education, Curriculum Branch
- Debbie Duvall

BACKGROUND

**Partner jurisdictions:**

Alberta
British Columbia
Manitoba
Northwest Territories
Nunavut
Saskatchewan
Yukon Territory

The Western Canadian Protocol for Collaboration in Basic Education Kindergarten to Grade 12 was signed December 1993 by the Ministers of Education from Alberta, British Columbia, Manitoba, Northwest Territories, Saskatchewan and Yukon Territory. In February 2000, following the addition of Nunavut, the protocol was renamed the Western and Northern Canadian Protocol (WNCP) for Basic Education.

In 2005, the Ministers of Education from all the WNCP jurisdictions unanimously concurred with the rationale of the original partnership because of the importance placed on:

- common educational goals
- the ability to collaborate to achieve common goals
- high standards in education
- planning an array of educational opportunities
- removing obstacles to accessibility for individual learners
- optimum use of limited educational resources.

The Common Curriculum Framework for K–9 Mathematics was developed by the seven ministries of education in collaboration with teachers, administrators, parents, business representatives, post-secondary educators and others.

The framework identifies beliefs about mathematics, general and specific student outcomes, and achievement indicators agreed upon by the seven jurisdictions. Each of the provinces and territories will determine when and how the framework will be implemented within its own jurisdiction.
INTRODUCTION

PURPOSE OF THE DOCUMENT

This document provides a common base for the curriculum expectations mandated by each province and territory, which will result in consistent student outcomes in mathematics across jurisdictions and enable easier transfer for students moving from one jurisdiction to another. Its intent is to clearly communicate high expectations for students in mathematics education to all education partners across the jurisdictions and facilitate the development of common learning resources.

BELIEFS ABOUT STUDENTS AND MATHEMATICS LEARNING

Students are curious, active learners with individual interests, abilities and needs. They come to classrooms with varying knowledge, life experiences and backgrounds. A key component in successfully developing numeracy is making connections to these backgrounds and experiences.

Students learn by attaching meaning to what they do and need to construct their own meaning of mathematics. This meaning is best developed when learners encounter mathematical experiences that proceed from the simple to the complex and from the concrete to the abstract. The use of manipulatives and a variety of pedagogical approaches can address the diversity of learning styles and developmental stages of students, and enhance the formation of sound, transferable, mathematical concepts. At all levels, students benefit from working with a variety of materials, tools and contexts when constructing meaning about new mathematical ideas. Meaningful student discussions can provide essential links among concrete, pictorial and symbolic representations of mathematics.

The learning environment should value and respect all students’ experiences and ways of thinking, so that learners are comfortable taking intellectual risks, asking questions and posing conjectures. Students need to explore problem-solving situations in order to develop personal strategies and become mathematically literate. Learners must realize that it is acceptable to solve problems in different ways and that solutions may vary.
ABORIGINAL PERSPECTIVES

Aboriginal students in northern and western Canada come from diverse geographic areas with varied cultural and linguistic backgrounds. Students attend schools in a variety of settings including urban, rural and isolated communities. Teachers need to understand the diversity of cultures and experiences of students.

Aboriginal students often have a whole-world view of the environment in which they live and learn best in a holistic way. This means that students look for connections in learning and learn best when mathematics is contextualized and not taught as discrete components.

Aboriginal students come from cultures where learning takes place through active participation. Traditionally, little emphasis was placed upon the written word. Oral communication along with practical applications and experiences are important to student learning and understanding. It is also vital that teachers understand and respond to non-verbal cues so that student learning and mathematical understanding are optimized.

A variety of teaching and assessment strategies is required to build upon the diverse knowledge, cultures, communication styles, skills, attitudes, experiences and learning styles of students. The strategies used must go beyond the incidental inclusion of topics and objects unique to a culture or region, and strive to achieve higher levels of multicultural education (Banks and Banks, 1993).

AFFECTIVE DOMAIN

A positive attitude is an important aspect of the affective domain that has a profound effect on learning. Environments that create a sense of belonging, encourage risk taking and provide opportunities for success, help develop and maintain positive attitudes and self-confidence. Students with positive attitudes toward learning mathematics are likely to be motivated and prepared to learn, participate willingly in classroom activities, persist in challenging situations and engage in reflective practices.

Teachers, students and parents need to recognize the relationship between the affective and cognitive domains, and attempt to nurture those aspects of the affective domain that contribute to positive attitudes. To experience success, students must be taught to set achievable goals and assess themselves as they work toward these goals.

Striving toward success, and becoming autonomous and responsible learners are ongoing, reflective processes that involve revisiting the setting and assessing of personal goals.

To experience success, students must be taught to set achievable goals and assess themselves as they work toward these goals.
**EARLY CHILDHOOD**

Young children are naturally curious and develop a variety of mathematical ideas before they enter kindergarten. Children make sense of their environment through observations and interactions at home, in daycares, preschools, and in the community. Mathematics learning is embedded in everyday activities, such as playing, reading, storytelling, and helping around the home.

Activities can contribute to the development of number and spatial sense in children. Curiosity about mathematics is fostered when children are engaged in activities such as comparing quantities, searching for patterns, sorting objects, ordering objects, creating designs, building with blocks, and talking about these activities.

Positive early experiences in mathematics are as critical to child development as are early literacy experiences.

**GOALS FOR STUDENTS**

The main goals of mathematics education are to prepare students to:

- use mathematics confidently to solve problems
- communicate and reason mathematically
- appreciate and value mathematics
- make connections between mathematics and its applications
- commit themselves to lifelong learning
- become mathematically literate adults, using mathematics to contribute to society.

Students who have met these goals will:

- gain understanding and appreciation of the contributions of mathematics as a science, philosophy, and art
- exhibit a positive attitude toward mathematics
- engage and persevere in mathematical tasks and projects
- contribute to mathematical discussions
- take risks in performing mathematical tasks
- exhibit curiosity.

NATURE OF MATHEMATICS
change, constancy, number sense, patterns, relationships, spatial sense, uncertainty

GENERAL OUTCOMES, SPECIFIC OUTCOMES AND ACHIEVEMENT INDICATORS

MATHEMATICAL PROCESSES—COMMUNICATION, CONNECTIONS, MENTAL MATHEMATICS AND ESTIMATION, PROBLEM SOLVING, REASONING, TECHNOLOGY, VISUALIZATION
MATHEMATICAL PROCESSES

There are critical components that students must encounter in a mathematics program in order to achieve the goals of mathematics education and encourage lifelong learning in mathematics.

Students are expected to:

- **Communication [C]**
  - communicate in order to learn and express their understanding

- **Connections [CN]**
  - connect mathematical ideas to other concepts in mathematics, to everyday experiences and to other disciplines

- **Mental Mathematics and Estimation [ME]**
  - demonstrate fluency with mental mathematics and estimation

- **Problem Solving [PS]**
  - develop and apply new mathematical knowledge through problem solving

- **Reasoning [R]**
  - develop mathematical reasoning

- **Technology [T]**
  - select and use technologies as tools for learning and solving problems

- **Visualization [V]**
  - develop visualization skills to assist in processing information, making connections and solving problems.

The Common Curriculum Framework incorporates these seven interrelated mathematical processes that are intended to permeate teaching and learning along with the use of technology.

Communication [C]

Students need opportunities to read about, represent, view, write about, listen to and discuss mathematical ideas. These opportunities allow students to create links between their own language and ideas, and the formal language and symbols of mathematics.

Communication is important in clarifying, reinforcing and modifying ideas, attitudes and beliefs about mathematics. Students should be encouraged to use a variety of forms of communication while learning mathematics. Students also need to communicate their learning using mathematical terminology.

Communication can help students make connections among concrete, pictorial, symbolic, verbal, written and mental representations of mathematical ideas.
Connections [CN]

Contextualization and making connections to the experiences of learners are powerful processes in developing mathematical understanding. When mathematical ideas are connected to each other or to real-world phenomena, students can begin to view mathematics as useful, relevant and integrated.

Learning mathematics within contexts and making connections relevant to learners can validate past experiences, and increase student willingness to participate and be actively engaged.

The brain is constantly looking for and making connections. “Because the learner is constantly searching for connections on many levels, educators need to orchestrate the experiences from which learners extract understanding... Brain research establishes and confirms that multiple complex and concrete experiences are essential for meaningful learning and teaching” (Caine and Caine, 1991, p. 5).

Mental Mathematics and Estimation [ME]

Mental mathematics is a combination of cognitive strategies that enhances flexible thinking and number sense. It is calculating mentally without the use of external memory aids.

Mental mathematics enables students to determine answers without paper and pencil. It improves computational fluency by developing efficiency, accuracy and flexibility.

Even more important than performing computational procedures or using calculators is the greater facility that students need—more than ever before—with estimation and mental mathematics (National Council of Teachers of Mathematics, May 2005).

Students proficient with mental mathematics “become liberated from calculator dependence, build confidence in doing mathematics, become more flexible thinkers and are more able to use multiple approaches to problem solving” (Rubenstein, 2001).

Mental mathematics “provides a cornerstone for all estimation processes offering a variety of alternate algorithms and non-standard techniques for finding answers” (Hope, 1988).

Estimation is a strategy for determining approximate values or quantities, usually by referring to benchmarks or using referents, or for determining the reasonableness of calculated values. Students need to know how, when and what strategy to use when estimating.
Learning through problem solving should be the focus of mathematics at all grade levels. When students encounter new situations and respond to questions of the type, “How would you...?” or “How could you...?” the problem-solving approach is being modelled. Students develop their own problem-solving strategies by being open to listening, discussing and trying different strategies. In order for an activity to be problem-solving based, it must ask students to determine a way to get from what is known to what is sought. If students have already been given ways to solve the problem, it is not a problem, but practice. A true problem requires students to use prior learnings in new ways and contexts. Problem solving requires and builds depth of conceptual understanding and student engagement.

Problem solving is a powerful teaching tool that fosters multiple, creative and innovative solutions. Creating an environment where students openly look for and engage in finding a variety of strategies for solving problems empowers students to explore alternatives and develops confident, cognitive, mathematical risk takers.

Estimation is used to make mathematical judgements and develop useful, efficient strategies for dealing with situations in daily life.

Reasoning [R]

Mathematical reasoning helps students think logically and make sense of mathematics. Students need to develop confidence in their abilities to reason and justify their mathematical thinking. High-order questions challenge students to think and develop a sense of wonder about mathematics.

Mathematical experiences in and out of the classroom provide opportunities for inductive and deductive reasoning. Inductive reasoning occurs when students explore and record results, analyze observations, make generalizations from patterns and test these generalizations. Deductive reasoning occurs when students reach new conclusions based upon what is already known or assumed to be true.
**Technology [T]**

Technology contributes to the learning of a wide range of mathematical outcomes, and enables students to explore and create patterns, examine relationships, test conjectures and solve problems.

Calculators and computers can be used to:
- explore and demonstrate mathematical relationships and patterns
- organize and display data
- extrapolate and interpolate
- assist with calculation procedures as part of solving problems
- decrease the time spent on computations when other mathematical learning is the focus
- reinforce the learning of basic facts and test properties
- develop personal procedures for mathematical operations
- create geometric displays
- simulate situations.
- develop number sense.

Technology contributes to a learning environment in which the growing curiosity of students can lead to rich mathematical discoveries at all grade levels. While technology can be used in K–3 to enrich learning, it is expected that students will meet all outcomes without the use of technology.

**Visualization [V]**

Visualization “involves thinking in pictures and images, and the ability to perceive, transform and recreate different aspects of the visual-spatial world” (Armstrong, 1993, p. 10). The use of visualization in the study of mathematics provides students with opportunities to understand mathematical concepts and make connections among them.

Visual images and visual reasoning are important components of number, spatial and measurement sense. Number visualization occurs when students create mental representations of numbers.

Being able to create, interpret and describe a visual representation is part of spatial sense and spatial reasoning. Spatial visualization and reasoning enable students to describe the relationships among and between 3-D objects and 2-D shapes.

Measurement visualization goes beyond the acquisition of specific measurement skills. Measurement sense includes the ability to determine when to measure, when to estimate and to know several estimation strategies (Shaw & Cliatt, 1989).

Visualization is fostered through the use of concrete materials, technology and a variety of visual representations.
NATURE OF MATHEMATICS

- **Change**
- **Constancy**
- **Number Sense**
- **Patterns**
- **Relationships**
- **Spatial Sense**
- **Uncertainty**

Mathematics is one way of trying to understand, interpret and describe our world. There are a number of components that define the nature of mathematics and these are woven throughout this document. These components include: change, constancy, number sense, patterns, relationships, spatial sense and uncertainty.

**Change**

It is important for students to understand that mathematics is dynamic and not static. As a result, recognizing change is a key component in understanding and developing mathematics.

Within mathematics, students encounter conditions of change and are required to search for explanations of that change. To make predictions, students need to describe and quantify their observations, look for patterns, and describe those quantities that remain fixed and those that change. For example, the sequence 4, 6, 8, 10, 12, … can be described as:

- skip counting by 2s, starting from 4
- an arithmetic sequence, with first term 4 and a common difference of 2
- a linear function with a discrete domain (Steen, 1990, p. 184).

**Constancy**

Different aspects of constancy are described by the terms stability, conservation, equilibrium, steady state and symmetry (AAAS–Benchmarks, 1993, p. 270). Many important properties in mathematics and science relate to properties that do not change when outside conditions change. Examples of constancy include:

- the area of a rectangular region is the same regardless of the methods used to determine the solution
- the sum of the interior angles of any triangle is 180°
- the theoretical probability of flipping a coin and getting heads is 0.5.

Some problems in mathematics require students to focus on properties that remain constant. The recognition of constancy enables students to solve problems involving constant rates of change, lines with constant slope, direct variation situations or the angle sums of polygons.
**Number Sense**

Number sense, which can be thought of as intuition about numbers, is the most important foundation of numeracy (The Primary Program, B.C., 2000, p. 146).

A true sense of number goes well beyond the skills of simply counting, memorizing facts and the situational rote use of algorithms.

Number sense develops when students connect numbers to real-life experiences, and use benchmarks and referents. This results in students who are computationally fluent, flexible with numbers and have intuition about numbers. The evolving number sense typically comes as a by-product of learning rather than through direct instruction. However, number sense can be developed by providing rich mathematical tasks that allow students to make connections.

**Patterns**

Mathematics is about recognizing, describing and working with numerical and non-numerical patterns. Patterns exist in all strands and it is important that connections are made among strands. Working with patterns enables students to make connections within and beyond mathematics. These skills contribute to students’ interaction with and understanding of their environment.

Patterns may be represented in concrete, visual or symbolic form. Students should develop fluency in moving from one representation to another.

Students must learn to recognize, extend, create and use mathematical patterns. Patterns allow students to make predictions, and justify their reasoning when solving routine and non-routine problems.

Learning to work with patterns in the early grades helps develop students’ algebraic thinking that is foundational for working with more abstract mathematics in higher grades.

**Relationships**

Mathematics is used to describe and explain relationships. As part of the study of mathematics, students look for relationships among numbers, sets, shapes, objects and concepts. The search for possible relationships involves the collection and analysis of data, and describing relationships visually, symbolically, orally or in written form.
Spatial Sense

Spatial sense involves visualization, mental imagery and spatial reasoning. These skills are central to the understanding of mathematics. Spatial sense enables students to reason and interpret among and between 3-D and 2-D representations and identify relationships to mathematical strands.

Spatial sense is developed through a variety of experiences and interactions within the environment. The development of spatial sense enables students to solve problems involving 3-D objects and 2-D shapes.

Spatial sense offers a way to interpret and reflect on the physical environment and its 3-D or 2-D representations.

Some problems involve attaching numerals and appropriate units (measurement) to dimensions of objects. Spatial sense allows students to make predictions about the results of changing these dimensions. For example:

- knowing the dimensions of an object enables students to communicate about the object and create representations
- the volume of a rectangular solid can be calculated from given dimensions
- doubling the length of the side of a square increases the area by a factor of four.

Uncertainty

In mathematics, interpretations of data and the predictions made from data may lack certainty.

Events and experiments generate statistical data that can be used to make predictions. It is important to recognize that these predictions (interpolations and extrapolations) are based upon patterns that have a degree of uncertainty.

The quality of the interpretation is directly related to the quality of the data. An awareness of uncertainty allows students to assess the reliability of data and data interpretation.

Chance addresses the predictability of the occurrence of an outcome. As students develop their understanding of probability, the language of mathematics becomes more specific and describes the degree of uncertainty more accurately.
STRANDS

The learning outcomes in the Common Curriculum Framework are organized into four strands across the grades, K–9. Some strands are further subdivided into substrands. There is one general outcome per substrand across the grades, K–9.

The strands and substrands, including the general outcome for each, follow.

Number
• Develop number sense.

Patterns and Relations
Patterns
• Use patterns to describe the world and solve problems.

Variables and Equations
• Represent algebraic expressions in multiple ways.

Shape and Space
Measurement
• Use direct and indirect measure to solve problems.

3-D Objects and 2-D Shapes
• Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.

Transformations
• Describe and analyze position and motion of objects and shapes.

Statistics and Probability

Data Analysis
• Collect, display and analyze data to solve problems.

Chance and Uncertainty
• Use experimental or theoretical probabilities to represent and solve problems involving uncertainty.

OUTCOMES AND ACHIEVEMENT INDICATORS

The Common Curriculum Framework is stated in terms of general outcomes, specific outcomes and achievement indicators.

General outcomes are overarching statements about what students are expected to learn in each strand/substrand. The general outcome for each strand/substrand is the same throughout the grades.

Specific outcomes are statements that identify the specific skills, understanding and knowledge students are required to attain by the end of a given grade.

Achievement indicators are one example of a representative list of the depth, breadth and expectations for the outcome. Achievement indicators are pedagogy and context free.
In this document, the word “including” indicates that any ensuing items must be addressed to fully meet the learning outcome. The phrase “such as” indicates that the ensuing items are provided for illustrative purposes or clarification, and are not requirements that must be addressed to fully meet the learning outcome.

SUMMARY

The conceptual framework for K–9 mathematics describes the nature of mathematics, mathematical processes and the mathematical concepts to be addressed in Kindergarten to Grade 9 mathematics. The components are not meant to stand alone. Activities that take place in the mathematics classroom should stem from a problem-solving approach, be based on mathematical processes and lead students to an understanding of the nature of mathematics through specific knowledge, skills and attitudes among and between strands.
INSTRUCTIONAL FOCUS

The Common Curriculum Framework is arranged into four strands. These strands are not intended to be discrete units of instruction. The integration of outcomes across strands makes mathematical experiences meaningful. Students should make the connection between concepts both within and across strands.

Consider the following when planning for instruction.

- Integration of the mathematical processes within each strand is expected.
- By decreasing emphasis on rote calculation, drill and practice, and the size of numbers used in paper and pencil calculations, more time is available for concept development.
- Problem solving, reasoning and connections are vital to increasing mathematical fluency, and must be integrated throughout the program.
- There is to be a balance among mental mathematics and estimation, paper and pencil exercises, and the use of technology, including calculators and computers. Concepts should be introduced using manipulatives and gradually developed from the concrete to the pictorial to the symbolic.
GENERAL AND SPECIFIC OUTCOMES

GENERAL AND SPECIFIC OUTCOMES
BY STRAND (pages 18–51)

This section presents the general and specific outcomes for each strand, Kindergarten through Grade 9.

GENERAL AND SPECIFIC OUTCOMES
WITH ACHIEVEMENT INDICATORS
(pages 52–159)

This section presents specific outcomes with corresponding achievement indicators and is organized by strand within each grade. The list of indicators contained in this document is not intended to be exhaustive but rather to provide teachers with examples of evidence of understanding that may be used in determining whether or not students understand a given outcome. Teachers may use any number of these indicators or may choose to use other indicators as evidence that the desired learning has been achieved. Achievement indicators should also help teachers form a clear picture of the intent and scope of each mathematics outcome.

- **R** Reasoning
- **T** Technology
- **V** Visualization
- **[ ]** Indicates the strand or strand(s) to which the specific outcome is linked.
### Grade 5

**General Outcome**
Develop number sense.

**Specific Outcomes**

7. Demonstrate an understanding of fractions by using concrete and pictorial representations to:
   - create sets of equivalent fractions
   - compare fractions with like and unlike denominators.
   
   [C, CN, PS, R, V]

8. Describe and represent decimals (tenths, hundredths, thousandths) concretely, pictorially and symbolically.
   
   [C, CN, R, V]

9. Relate decimals to fractions (to thousandths).
   
   [CN, R, V]

10. Compare and order decimals (to thousandths), by using:
    - benchmarks
    - place value
    - equivalent decimals.
    
    [CN, R, V]

### Grade 6

**General Outcome**
Develop number sense.

**Specific Outcomes**

8. Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors).
   
   [C, CN, ME, PS, R, V]

9. Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers).
   
   [CN, ME, PS, T]

### Grade 7

**Specific Outcomes**

8. Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors).
   
   [C, CN, ME, PS, R, V]

9. Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers).
   
   [CN, ME, PS, T]

### Grade 8

**Specific Outcomes**

8. Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors).
   
   [C, CN, ME, PS, R, V]

9. Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers).
   
   [CN, ME, PS, T]

### Grade 9

**Specific Outcomes**

8. Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors).
   
   [C, CN, ME, PS, R, V]

9. Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers).
   
   [CN, ME, PS, T]

| **Specific Outcomes** | 10. Describe and use mental mathematics strategies (memorization not intended), such as:  
- counting on and counting back  
- making 10  
- doubles  
- using addition to subtract for the basic addition and subtraction facts to 18.  
[C, CN, ME, PS, R, V] | 10. Apply mental mathematics strategies, such as:  
- using doubles  
- making 10  
- one more, one less  
- two more, two less  
- addition for subtraction to determine basic addition facts to 18 and related subtraction facts.  
[C, CN, ME, R, V] | 10. Apply mental mathematics strategies and number properties, such as:  
- using doubles  
- making 10  
- using the commutative property  
- using the property of zero  
- thinking addition for subtraction to determine answers for basic addition facts and related subtraction facts (to 18).  
[C, CN, ME, R, V] | 8. Demonstrate an understanding of fractions less than or equal to one by using concrete and pictorial representations to:  
- name and record fractions for the parts of a whole or a set  
- compare and order fractions  
- model and explain that for different wholes, two identical fractions may not represent the same quantity  
- provide examples of where fractions are used.  
[C, CN, PS, R, V] |
| **Specific Outcomes** | | 9. Describe and represent decimals (tenths and hundredths) concretely, pictorially and symbolically.

### Specific Outcomes

**Grade 5**

1. Design and construct different rectangles given either perimeter or area, or both (whole numbers) and draw conclusions. [C, CN, PS, R, V]

2. Demonstrate an understanding of measuring length (mm) by:
   - selecting and justifying referents for the unit mm
   - modelling and describing the relationship between mm and cm units, and between mm and m units. [C, CN, ME, PS, R, V]

**Grade 6**

1. Demonstrate understanding of angles by:
   - identifying examples of angles in the environment
   - classifying angles according to their measure
   - estimating the measure of angles using 45°, 90° and 180° as reference angles
   - determining angle measures in degrees
   - drawing and labelling angles when the measure is specified. [C, CN, ME, V]

2. Demonstrate that the sum of interior angles is:
   - 180° in a triangle
   - 360° in a quadrilateral. [C, R]

3. Demonstrate an understanding of circles by:
   - describing the relationships among radius, diameter and circumference of circles
   - relating circumference to pi
   - determining the sum of the central angles
   - constructing circles with a given radius or diameter
   - solving problems involving the radii, diameters and circumferences of circles. [C, CN, R, V]

4. Develop and apply a formula for determining the area of:
   - triangles
   - parallelograms
   - circles. [CN, PS, R, V]

**Grade 7**

1. Demonstrate an understanding of circles by:
   - describing the relationships among radius, diameter and circumference of circles
   - relating circumference to pi
   - determining the sum of the central angles
   - constructing circles with a given radius or diameter
   - solving problems involving the radii, diameters and circumferences of circles. [C, CN, R, V]

2. Develop and apply a formula for determining the area of:
   - triangles
   - parallelograms
   - circles. [CN, PS, R, V]

3. Demonstrate that the sum of interior angles is:
   - 180° in a triangle
   - 360° in a quadrilateral. [C, R]

**Grade 8**

1. Develop and apply the Pythagorean theorem to solve problems. [CN, PS, R, V, T]

2. Draw and construct nets for 3-D objects. [C, CN, PS, V]

3. Determine the surface area of:
   - right rectangular prisms
   - right triangular prisms
   - right cylinders to solve problems. [C, CN, PS, R, V]

4. Develop and apply formulas for determining the volume of right prisms and right cylinders. [C, CN, PS, R, V]

**Grade 9**

1. Solve problems and justify the solution strategy using circle properties, including:
   - the perpendicular from the centre of a circle to a chord bisects the chord
   - the measure of the central angle is equal to twice the measure of the inscribed angle subtended by the same arc
   - the inscribed angles subtended by the same arc are congruent
   - a tangent to a circle is perpendicular to the radius at the point of tangency. [C, CN, PS, R, T, V]

General Outcome
Collect, display and analyze data to solve problems.

Specific Outcomes
3. Develop and implement a project plan for the collection, display and analysis of data by:
   • formulating a question for investigation
   • choosing a data collection method that includes social considerations
   • selecting a population or a sample
   • collecting the data
   • displaying the collected data in an appropriate manner
   • drawing conclusions to answer the question.

### General and Specific Outcomes with Achievement Indicators

**Kindergarten**  
**Strand:** Number

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>General Outcome: Develop number sense.</th>
<th>Achievement Indicators</th>
</tr>
</thead>
</table>
| **1.** Say the number sequence by 1s starting anywhere from 1 to 10 and from 10 to 1.  
[C, CN, V] | | Name the number that comes after a given number, one to nine.  
Name the number that comes before a given number, two to ten.  
Recite number names from a given number to a stated number (forward – one to ten, backward – ten to one) using visual aids. |
| **2.** Recognize, at a glance, and name familiar arrangements of 1 to 5 objects or dots.  
[C, CN, ME, V] | | Look briefly at a given familiar arrangement of 1 to 5 objects or dots and identify the number represented without counting.  
Identify the number represented by a given dot arrangement on a five frame. |
| **3.** Relate a numeral, 1 to 10, to its respective quantity.  
[CN, R, V] | | Construct a set of objects corresponding to a given numeral.  
Name the number for a given set of objects.  
Hold up the appropriate number of fingers for a given numeral.  
Match numerals with their given pictorial representations. |
| **4.** Represent and describe numbers 2 to 10, concretely and pictorially.  
[C, CN, ME, R, V] | | Show a given number as two parts, using fingers, counters or other objects, and name the number of objects in each part.  
Show a given number as two parts using pictures and name the number of objects in each part. |
| **5.** Compare quantities, 1 to 10, using one-to-one correspondence.  
[C, CN, V] | | Construct a set to show more than, fewer than or as many as a given set.  
Compare two given sets through direct comparison and describe the sets using words, such as more, fewer, as many as or the same number. |

### Strand: Patterns and Relations (Patterns)

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is expected that students will:</td>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. Demonstrate an understanding of repeating patterns (two or three elements) by:
   - identifying
   - reproducing
   - extending
   - creating patterns using manipulatives, sounds and actions.  

   

[C, CN, PS, V]  

- Distinguish between repeating patterns and non-repeating sequences in a given set by identifying the part that repeats.  
- Copy a given repeating pattern, e.g., actions, sound, colour, size, shape, orientation, and describe the pattern.  
- Extend a variety of given repeating patterns to two more repetitions.  
- Create a repeating pattern using manipulatives, musical instruments or actions and describe the pattern.  
- Identify and describe a repeating pattern in the classroom, the school and outdoors, e.g., in a familiar song, in a nursery rhyme.
| Kindergarten | General Outcome: Use direct or indirect measurement to solve problems. |
| Strand: Shape and Space (Measurement) | Achievement Indicators |
| Specific Outcomes | The following set of indicators may be used to determine whether students have met the corresponding specific outcome. |
| It is expected that students will: | |
| 1. Use direct comparison to compare two objects based on a single attribute, such as length (height), mass (weight) and volume (capacity). [C, CN, PS, R, V] | ➢ Compare the length (height) of two given objects and explain the comparison using the words shorter, longer (taller) or almost the same. |
| | ➢ Compare the mass (weight) of two given objects and explain the comparison using the words lighter, heavier or almost the same. |
| | ➢ Compare the volume (capacity) of two given objects and explain the comparison using the words less, more, bigger, smaller or almost the same. |
**Kindergarten**  
**Strand:** Shape and Space  
**(3-D Objects and 2-D Shapes)**

**General Outcome:** Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.

<table>

<tbody>
<tr>
<td><strong>It is expected that students will:</strong></td>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>
| 2. Sort 3-D objects using a single attribute.  
[C, CN, PS, R, V] | ➢ Sort a given set of familiar 3-D objects using a single attribute, such as size or shape, and explain the sorting rule.  
➢ Determine the difference between two given pre-sorted sets by explaining a sorting rule used to sort them. |
| 3. Build and describe 3-D objects.  
[CN, PS, V] | ➢ Create a representation of a given 3-D object using materials, such as modelling clay and building blocks, and compare the representation to the original 3-D object.  
➢ Describe a given 3-D object using words, such as big, little, round, like a box and like a can. |
## Grade 1
### Strand: Number

#### Specific Outcomes

*It is expected that students will:*

1. Say the number sequence, 0 to 100, by:
   - 1s forward and backward between any two given numbers
   - 2s to 20, forward starting at 0
   - 5s and 10s to 100, forward starting at 0.
   [C, CN, V, ME]

2. Recognize, at a glance, and name familiar arrangements of 1 to 10 objects or dots.
   [C, CN, ME, V]

3. Demonstrate an understanding of counting by:
   - indicating that the last number said identifies “how many”
   - showing that any set has only one count
   - using the counting on strategy
   - using parts or equal groups to count sets.
   [C, CN, ME, R, V]

#### Achievement Indicators

*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.*

- Recite forward by 1s the number sequence between two given numbers (0 to 100).
- Recite backward by 1s the number sequence between two given numbers.
- Record a given numeral (0 to 100) symbolically when it is presented orally.
- Read a given numeral (0 to 100) when it is presented symbolically.
- Skip count by 2s to 20 starting at 0.
- Skip count by 5s to 100 starting at 0.
- Skip count forward by 10s to 100 starting at 0.
- Identify and correct errors and omissions in a given number sequence.

- Look briefly at a given familiar arrangement of objects or dots and identify the number represented without counting.
- Look briefly at a given familiar arrangement and identify how many objects there are without counting.
- Identify the number represented by a given arrangement of objects or dots on a ten frame.

- Answer the question, “How many are in the set?” using the last number counted in a given set.
- Identify and correct counting errors in a given counting sequence.
- Show that the count of the number of objects in a given set does not change regardless of the order in which the objects are counted.
- Count the number of objects in a given set, rearrange the objects, predict the new count and recount to verify the prediction.
- Determine the total number of objects in a given set, starting from a known quantity and counting on.
- Count quantity using groups of 2s, 5s or 10s and counting on.
## Grade 1

### Strand: Number (continued)

<table>
<thead>
<tr>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>

### 4. Represent and describe numbers to 20 concretely, pictorially and symbolically.  
[C, CN, V]
- Represent a given number up to 20 using a variety of manipulatives, including ten frames and base ten materials.
- Read given number words to 20.
- Partition any given quantity up to 20 into 2 parts and identify the number of objects in each part.
- Model a given number using two different objects, e.g., 10 desks represents the same number as 10 pencils.
- Place given numerals on a number line with benchmarks 0, 5, 10 and 20.

### 5. Compare sets containing up to 20 elements to solve problems using:  
- referents  
- one-to-one correspondence.  
[C, CN, ME, PS, R, V]
- Build a set equal to a given set that contains up to 20 elements.
- Build a set that has more, fewer or as many elements as a given set.
- Build several sets of different objects that have the same given number of elements in the set.
- Compare two given sets using one-to-one correspondence and describe them using comparative words, such as more, fewer or as many.
- Compare a set to a given referent using comparative language.
- Solve a given story problem (pictures and words) that involves the comparison of two quantities.

### 6. Estimate quantities to 20 by using referents.  
[C, ME, PS, R, V]
- Estimate a given quantity by comparing it to a given referent (known quantity).
- Select an estimate for a given quantity by choosing between at least two possible choices and explain the choice.

### 7. Demonstrate, concretely and pictorially, how a given number can be represented by a variety of equal groups with and without singles.  
[C, R, V]
- Represent a given number in a variety of equal groups with and without singles, e.g., 17 can be represented by 8 groups of 2 and one single, 5 groups of 3 and two singles, 4 groups of 4 and one single, and 3 groups of 5 and two singles.
- Recognize that for a given number of counters, no matter how they are grouped, the total number of counters does not change.
- Group a set of given counters into equal groups in more than one way.
<table>
<thead>
<tr>
<th>Grade 1</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>
| **Strand: Number (continued)** | **8.** Identify the number, up to 20, that is one more, two more, one less and two less than a given number.  
[C, CN, ME, R, V] | ➢ Name the number that is one more, two more, one less or two less than a given number, up to 20.  
➢ Represent a number on a ten frame that is one more, two more, one less or two less than a given number. |
| | **9.** Demonstrate an understanding of addition of numbers with answers to 20 and their corresponding subtraction facts, concretely, pictorially and symbolically by:  
• using familiar and mathematical language to describe additive and subtractive actions from their experience  
• creating and solving problems in context that involve addition and subtraction  
• modelling addition and subtraction using a variety of concrete and visual representations, and recording the process symbolically.  
[C, CN, ME, PS, R, V] | ➢ Act out a given story problem presented orally or through shared reading.  
➢ Indicate if the scenario in a given story problem represents additive or subtractive action.  
➢ Represent the numbers and actions presented in a given story problem by using manipulatives, and record them using sketches and/or number sentences.  
➢ Create a story problem for addition that connects to student experience and simulate the action with counters.  
➢ Create a story problem for subtraction that connects to student experience and simulate the action with counters.  
➢ Create a word problem for a given number sentence.  
➢ Represent a given story problem pictorially or symbolically to show the additive or subtractive action and solve the problem. |
| | **10.** Describe and use mental mathematics strategies (memorization not intended), such as:  
• counting on and counting back  
• making 10  
• doubles  
• using addition to subtract to determine the basic addition facts to 18 and related subtraction facts.  
[C, CN, ME, PS, R, V] | (It is not intended that students recall the basic facts but become familiar with strategies to mentally determine sums and differences.)  
➢ Use and describe a personal strategy for determining a given sum.  
➢ Use and describe a personal strategy for determining a given difference.  
➢ Write the related subtraction fact for a given addition fact.  
➢ Write the related addition fact for a given subtraction fact. |
## Grade 1

### Strand: Patterns and Relations (Patterns)

### General Outcome:
Use patterns to describe the world and solve problems.

### Specific Outcomes

<table>
<thead>
<tr>
<th>It is expected that students will:</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Achievement Indicators</th>
</tr>
</thead>
</table>

#### 1. Demonstrate an understanding of repeating patterns (two to four elements) by:
- describing
- reproducing
- extending
- creating
patterns using manipulatives, diagrams, sounds and actions.
[C, PS, R, V]

- Describe a given repeating pattern containing two to four elements in its core.
- Identify errors in a given repeating pattern.
- Identify the missing element(s) in a given repeating pattern.
- Create and describe a repeating pattern using a variety of manipulatives, musical instruments and actions.
- Reproduce and extend a given repeating pattern using manipulatives, diagrams, sounds and actions.
- Identify and describe a repeating pattern in the environment, e.g., classroom, outdoors, using everyday language.
- Identify repeating events, e.g., days of the week, birthdays, seasons.

#### 2. Translate repeating patterns from one representation to another.
[C, R, V]

- Represent a given repeating pattern using another mode, e.g., actions to sound, colour to shape, ABC ABC to blue yellow green blue yellow green.
- Describe a given repeating pattern using a letter code, e.g., ABC ABC…
### Grade 1

**Strand:** Patterns and Relations  
(Variables and Equations)

**General Outcome:** Represent algebraic expressions in multiple ways.

<table>
<thead>

</table>
| 3. Describe equality as a balance and inequality as an imbalance, concretely and pictorially (0 to 20). [C, CN, R, V] | ➢ Construct two equal sets using the same objects (same shape and mass) and demonstrate their equality of number using a balance scale.  
➢ Construct two unequal sets using the same objects (same shape and mass) and demonstrate their inequality of number using a balance scale.  
➢ Determine if two given concrete sets are equal or unequal and explain the process used. |
| 4. Record equalities using the equal symbol. [C, CN, PS, V] | ➢ Represent a given equality using manipulatives or pictures.  
➢ Represent a given pictorial or concrete equality in symbolic form.  
➢ Provide examples of equalities where the given sum or difference is on either the left or right side of the equal symbol (=).  
➢ Record different representations of the same quantity (0 to 20) as equalities. |
<table>
<thead>
<tr>
<th>Grade 1</th>
<th>General Outcome: Use direct or indirect measurement to solve problems.</th>
</tr>
</thead>
</table>
| **Strand:** Shape and Space (Measurement) | **Specific Outcomes**
*It is expected that students will:*

1. Demonstrate an understanding of measurement as a process of comparing by:
   - identifying attributes that can be compared
   - ordering objects
   - making statements of comparison
   - filling, covering or matching.

   [C, CN, PS, R, V]

<table>
<thead>
<tr>
<th>Achievement Indicators</th>
<th>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</th>
</tr>
</thead>
<tbody>
<tr>
<td>➢ Identify common attributes, such as length (height), mass (weight), volume (capacity) and area, that could be used to compare a given set of two objects.</td>
<td></td>
</tr>
<tr>
<td>➢ Compare two given objects and identify the attributes used to compare.</td>
<td></td>
</tr>
<tr>
<td>➢ Determine which of two or more given objects is longest/shortest by matching and explain the reasoning.</td>
<td></td>
</tr>
<tr>
<td>➢ Determine which of two or more given objects is heaviest/lightest by comparing and explain the reasoning.</td>
<td></td>
</tr>
<tr>
<td>➢ Determine which of two or more given objects holds the most/least by filling and explain the reasoning.</td>
<td></td>
</tr>
<tr>
<td>➢ Determine which of two or more given objects has the greatest/least area by covering and explain the reasoning.</td>
<td></td>
</tr>
</tbody>
</table>
**Grade 1**  
**Strand:** Shape and Space  
(3-D Objects and 2-D Shapes)

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General Outcome:</strong> Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.</td>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

2. Sort 3-D objects and 2-D shapes using one attribute, and explain the sorting rule.  
   [C, CN, R, V]  
   - Sort a given set of familiar 3-D objects or 2-D shapes using a given sorting rule.  
   - Sort a given set of familiar 3-D objects using a single attribute determined by the student and explain the sorting rule.  
   - Sort a given set of 2-D shapes using a single attribute determined by the student and explain the sorting rule.  
   - Determine the difference between two given pre-sorted sets of familiar 3-D objects or 2-D shapes and explain a possible sorting rule used to sort them.

3. Replicate composite 2-D shapes and 3-D objects.  
   [CN, PS, V]  
   - Select 2-D shapes from a given set of 2-D shapes to reproduce a given composite 2-D shape.  
   - Select 3-D objects from a given set of 3-D objects to reproduce a given composite 3-D object.  
   - Predict and select the 2-D shapes used to produce a composite 2-D shape, and verify by deconstructing the composite shape.  
   - Predict and select the 3-D objects used to produce a composite 3-D object, and verify by deconstructing the composite object.

4. Compare 2-D shapes to parts of 3-D objects in the environment.  
   [C, CN, V]  
   - Identify 3-D objects in the environment that have parts similar to a given 2-D shape.
<table>
<thead>
<tr>
<th>Grade 2</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strand: Number</td>
<td></td>
</tr>
</tbody>
</table>

**Specific Outcomes**

*It is expected that students will:*

1. Say the number sequence from 0 to 100 by:
   - 2s, 5s and 10s, forward and backward, using starting points that are multiples of 2, 5 and 10 respectively
   - 10s using starting points from 1 to 9
   - 2s starting from 1.
   
   [C, CN, ME, R]

   - Extend a given skip counting sequence (by 2s, 5s or 10s) forward and backward.
   - Skip count by 10s, given any number from 1 to 9 as a starting point.
   - Identify and correct errors and omissions in a given skip counting sequence.
   - Count a given sum of money with pennies, nickels or dimes (to 100¢).
   - Count quantity using groups of 2s, 5s or 10s and counting on.

2. Demonstrate if a number (up to 100) is even or odd.
   
   [C, CN, PS, R]

   - Use concrete materials or pictorial representations to determine if a given number is even or odd.
   - Identify even and odd numbers in a given sequence, such as in a hundred chart.
   - Sort a given set of numbers into even and odd.

3. Describe order or relative position using ordinal numbers (up to tenth).
   
   [C, CN, R]

   - Indicate a position of a specific object in a sequence by using ordinal numbers up to tenth.
   - Compare the ordinal position of a specific object in two different given sequences.

4. Represent and describe numbers to 100, concretely, pictorially and symbolically.
   
   [C, CN, V]

   - Represent a given number using concrete materials, such as ten frames and base ten materials.
   - Represent a given number using coins (pennies, nickels, dimes and quarters).
   - Represent a given number using tallies.
   - Represent a given number pictorially.
   - Represent a given number using expressions, e.g., 24 + 6, 15 + 15, 40 – 10.
   - Read a given number (0–100) in symbolic or word form.
   - Record a given number (0–20) in words.
### Grade 2

#### Strand: Number (continued)

<table>
<thead>
<tr>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Order a given set of numbers in ascending or descending order and verify the result using a hundred chart, number line, ten frames or by making references to place value.</td>
</tr>
<tr>
<td>Identify errors in a given ordered sequence.</td>
</tr>
<tr>
<td>Identify missing numbers in a given hundred chart.</td>
</tr>
<tr>
<td>Identify errors in a given hundred chart.</td>
</tr>
</tbody>
</table>

| 5. Compare and order numbers up to 100.  |
| [C, CN, R, V] |
| ➢ Order a given set of numbers in ascending or descending order and verify the result using a hundred chart, number line, ten frames or by making references to place value. |
| ➢ Identify errors in a given ordered sequence. |
| ➢ Identify missing numbers in a given hundred chart. |
| ➢ Identify errors in a given hundred chart. |

| 6. Estimate quantities to 100 using referents.  |
| [C, ME, PS, R] |
| ➢ Estimate a given quantity by comparing it to a referent (known quantity). |
| ➢ Estimate the number of groups of ten in a given quantity using 10 as a referent. |
| ➢ Select between two possible estimates for a given quantity and explain the choice. |

| 7. Illustrate, concretely and pictorially, the meaning of place value for numerals to 100.  |
| [C, CN, R, V] |
| ➢ Explain and show with counters the meaning of each digit for a given 2-digit numeral with both digits the same, e.g., for the numeral 22, the first digit represents two tens (twenty counters) and the second digit represents two ones (two counters). |
| ➢ Count the number of objects in a given set using groups of 10s and 1s, and record the result as a 2-digit numeral under the headings of 10s and 1s. |
| ➢ Describe a given 2-digit numeral in at least two ways, e.g., 24 as two 10s and four 1s, twenty and four, two groups of ten and four left over, and twenty four ones. |
| ➢ Illustrate using ten frames and diagrams that a given numeral consists of a certain number of groups of ten and a certain number of ones. |
| ➢ Illustrate using proportional base 10 materials that a given numeral consists of a certain number of tens and a certain number of ones. |
| ➢ Explain why the value of a digit depends on its placement within a numeral. |

| 8. Demonstrate and explain the effect of adding zero to or subtracting zero from any number.  |
| [C, R] |
| ➢ Add zero to a given number and explain why the sum is the same as the addend. |
| ➢ Subtract zero from a given number and explain why the difference is the same as the given number. |
Grade 2  
**Strand:** Number (continued)  

### General Outcome: Develop number sense.

9. Demonstrate an understanding of addition (limited to 1 and 2-digit numerals) with answers to 100 and the corresponding subtraction by:
   - using personal strategies for adding and subtracting with and without the support of manipulatives
   - creating and solving problems that involve addition and subtraction
   - explaining that the order in which numbers are added does not affect the sum
   - explaining that the order in which numbers are subtracted may affect the difference.

   | [C, CN, ME, PS, R, V] |

10. Apply mental mathematics strategies, such as:
   - using doubles
   - making 10
   - one more, one less
   - two more, two less
   - building on a known double
   - addition for subtraction

   to determine basic addition facts to 18 and related subtraction facts.

   | [C, CN, ME, R, V] |

   ➢ Model addition and subtraction using concrete materials or visual representations and record the process symbolically.
   ➢ Create an addition or a subtraction number sentence and a story problem for a given solution.
   ➢ Solve a given problem involving a missing addend and describe the strategy used.
   ➢ Solve a given problem involving a missing minuend or subtrahend and describe the strategy used.
   ➢ Match a number sentence to a given missing addend problem.
   ➢ Match a number sentence to a given missing subtrahend or minuend problem.
   ➢ Add a given set of numbers in two different ways, and explain why the sum is the same, e.g., $2 + 5 + 3 + 8 = (2 + 3) + 5 + 8$ or $5 + 3 + (8 + 2)$.

   | [C] Communication | [PS] Problem Solving |
   | [CN] Connections | [R] Reasoning |
   | [V] Visualization |
## Grade 2

**Strand: Patterns and Relations (Patterns)**

### 1. Demonstrate an understanding of repeating patterns (three to five elements) by:
- describing
- extending
- comparing
- creating
  patterns using manipulatives, diagrams, sounds and actions.

[C, CN, PS, R, V]

### General Outcome:
Use patterns to describe the world and solve problems.

- Identify the core of a given repeating pattern.
- Describe and extend a given double attribute pattern.
- Explain the rule used to create a given repeating non-numerical pattern.
- Predict an element in a given repeating pattern using a variety of strategies.
- Predict an element of a given repeating pattern and extend the pattern to verify the prediction.

### 2. Demonstrate an understanding of increasing patterns by:
- describing
- reproducing
- extending
- creating
  patterns using manipulatives, diagrams, sounds and actions (numbers to 100).

[C, CN, PS, R, V]

### General Outcome:

- Identify and describe increasing patterns in a variety of given contexts, e.g., hundred chart, number line, addition tables, calendar, a tiling pattern or drawings.
- Represent a given increasing pattern concretely and pictorially.
- Identify errors in a given increasing pattern.
- Explain the rule used to create a given increasing pattern.
- Create an increasing pattern and explain the pattern rule.
- Represent a given increasing pattern using another mode, e.g., colour to shape.
- Solve a given problem using increasing patterns.
- Identify and describe increasing patterns in the environment, e.g., house/room numbers, flower petals, book pages, calendar, pine cones, leap years.
- Determine missing elements in a given concrete, pictorial or symbolic increasing pattern and explain the reasoning.
**Grade 2**  
**Strand:** Patterns and Relations  
(Variables and Equations)

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>General Outcome: Represent algebraic expressions in multiple ways.</th>
</tr>
</thead>
</table>

**It is expected that students will:**

3. Demonstrate and explain the meaning of equality and inequality by using manipulatives and diagrams (0 to 100).
   
   [C, CN, R, V]

   - Determine whether two given quantities of the same object (same shape and mass) are equal by using a balance scale.
   - Construct and draw two unequal sets using the same object (same shape and mass) and explain the reasoning.
   - Demonstrate how to change two given sets, equal in number, to create inequality.
   - Choose from three or more given sets the one that does not have a quantity equal to the others and explain why.

4. Record equalities and inequalities symbolically using the equal symbol or the not equal symbol.
   
   [C, CN, R, V]

   - Determine whether two sides of a given number sentence are equal (=) or not equal (≠). Write the appropriate symbol and justify the answer.
   - Model equalities using a variety of concrete representations and record the equality.
   - Model inequalities using a variety of concrete representations and record the inequality.
## Grade 2

| 1. Relate the number of days to a week and the number of months to a year in a problem-solving context. [C, CN, PS, R] | | ➢ Read a date on a calendar.  
➢ Name and order the days of the week.  
➢ Identify the day of the week and the month of the year for an identified calendar date.  
➢ Communicate that there are seven days in a week and twelve months in a year.  
➢ Determine whether a given set of days is more or less than a week.  
➢ Identify yesterday’s/tomorrow’s date.  
➢ Identify the month that comes before and the month that comes after a given month.  
➢ Name and order the months of the year.  
➢ Solve a given problem involving time which is limited to the number of days in a week and the number of months in a year. |
| 2. Relate the size of a unit of measure to the number of units (limited to non-standard units) used to measure length and mass (weight). [C, CN, ME, R, V] | | ➢ Explain why one of two given non-standard units may be a better choice for measuring the length of an object.  
➢ Explain why one of two given non-standard units may be a better choice for measuring the mass of an object.  
➢ Select a non-standard unit for measuring the length or mass of an object and explain why it was chosen.  
➢ Estimate the number of non-standard units needed for a given measurement task.  
➢ Explain why the number of units of a measurement will vary depending upon the unit of measure used. |
| 3. Compare and order objects by length, height, distance around and mass (weight) using non-standard units, and make statements of comparison. [C, CN, ME, R, V] | | ➢ Estimate, measure and record the length, height, distance around or mass (weight) of a given object using non-standard units.  
➢ Compare and order the measure of two or more objects in ascending or descending order and explain the method of ordering. |
General Outcome: Use direct or indirect measurement to solve problems.

4. Measure length to the nearest non-standard unit by:
   • using multiple copies of a unit
   • using a single copy of a unit (iteration process).
   \([C, ME, R, V]\)
   - Explain why overlapping or leaving gaps does not result in accurate measures.
   - Count the number of non-standard units required to measure the length of a given object using a single copy or multiple copies of a unit.
   - Estimate and measure a given object using multiple copies of a non-standard unit and using a single copy of the same unit many times, and explain the results.
   - Estimate and measure, using non-standard units, a given length that is not a straight line.

5. Demonstrate that changing the orientation of an object does not alter the measurements of its attributes.
   \([C, R, V]\)
   - Measure a given object, change the orientation, re-measure and explain the results.

<tbody>
<tr>
<td><em>It is expected that students will:</em></td>
<td>Develop number sense.</td>
<td>The following set of indicators <em>may</em> be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. **Say the number sequence forward and backward from 0 to 1000 by:**
   - 5s, 10s or 100s using any starting point
   - 3s using starting points that are multiples of 3
   - 4s using starting points that are multiples of 4
   - 25s using starting points that are multiples of 25.
   
   [C, CN, ME]

   - Extend a given skip counting sequence by 5s, 10s or 100s, forward and backward, using a given starting point.
   - Extend a given skip counting sequence by 3s, forward and backward, starting at a given multiple of 3.
   - Extend a given skip counting sequence by 4s, forward and backward, starting at a given multiple of 4.
   - Extend a given skip counting sequence by 25s, forward and backward, starting at a given multiple of 25.
   - Identify and correct errors and omissions in a given skip counting sequence.
   - Determine the value of a given set of coins (nickels, dimes, quarters, loonies) by using skip counting.
   - Identify and explain the skip counting pattern for a given number sequence.

2. **Represent and describe numbers to 1000, concretely, pictorially and symbolically.**
   
   [C, CN, V]

   - Read a given three-digit numeral without using the word “and,” e.g., 321 is three hundred twenty one, NOT three hundred AND twenty one.
   - Read a given number word (0 to 1000).
   - Represent a given number as an expression, e.g., 300 – 44 for 256 or 20 + 236.
   - Represent a given number using manipulatives, such as base ten materials.
   - Represent a given number pictorially.
   - Write number words for given multiples of ten to 90.
   - Write number words for given multiples of a hundred to 900.
## Grade 3

### Strand: Number (continued)

### General Outcome: Develop number sense.

<table>
<thead>
<tr>
<th>Grade 3 Strand: Number (continued)</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>
| 3. Compare and order numbers to 1000. | - Place a given set of numbers in ascending or descending order and verify the result by using a hundred chart, e.g., a one hundred chart, a two hundred chart, a three hundred chart, a number line or by making references to place value.  
- Create as many different 3-digit numerals as possible, given three different digits. Place the numbers in ascending or descending order.  
- Identify errors in a given ordered sequence.  
- Identify missing numbers in parts of a given hundred chart.  
- Identify errors in a given hundred chart. |

| 4. Estimate quantities less than 1000 using referents. | - Estimate the number of groups of ten in a given quantity using 10 as a referent (known quantity).  
- Estimate the number of groups of a hundred in a given quantity using 100 as a referent.  
- Estimate a given quantity by comparing it to a referent.  
- Select an estimate for a given quantity by choosing among three possible choices.  
- Select and justify a referent for determining an estimate for a given quantity. |

| 5. Illustrate, concretely and pictorially, the meaning of place value for numerals to 1000. | - Record, in more than one way, the number represented by given proportional and non-proportional concrete materials.  
- Represent a given number in different ways using proportional and non-proportional concrete materials and explain how they are equivalent, e.g., 351 can be represented as three 100s, five 10s and one 1s, or two 100s, fifteen 10s and one 1s, or three 100s, four 10s and eleven 1s.  
- Explain, and show with counters, the meaning of each digit for a given 3-digit numeral with all digits the same, e.g., for the numeral 222, the first digit represents two hundreds (two hundred counters) the second digit represents two tens (twenty counters) and the third digit represents two ones (two counters). |
### Grade 3
#### Strand: Number (continued)

<table>
<thead>
<tr>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>

6. **Describe and apply mental mathematics strategies for adding two 2-digit numerals, such as:**
   - adding from left to right
   - taking one addend to the nearest multiple of ten and then compensating
   - using doubles.
   [C, ME, PS, R, V]  
   ➢ Add two given 2-digit numerals using a mental mathematics strategy and explain or illustrate the strategy.
   ➢ Explain how to use the “adding from left to right” strategy, e.g., to determine the sum of $23 + 46$, think $20 + 40$ and $3 + 6$.
   ➢ Explain how to use the “taking one addend to the nearest multiple of ten” strategy, e.g., to determine the sum of $28 + 47$, think $30 + 47 – 2$ or $50 + 28 – 3$.
   ➢ Explain how to use the “using doubles” strategy, e.g., to determine the sum of $24 + 26$, think $25 + 25$; to determine the sum of $25 + 26$, think $25 + 25 + 1$ or doubles plus 1.
   ➢ Apply a mental mathematics strategy for adding two given 2-digit numerals.

7. **Describe and apply mental mathematics strategies for subtracting two 2-digit numerals, such as:**
   - taking the subtrahend to the nearest multiple of ten and then compensating
   - thinking of addition
   - using doubles.
   [C, ME, PS, R, V]  
   ➢ Subtract two given 2-digit numerals using a mental mathematics strategy and explain or model the strategy used.
   ➢ Explain how to use the “taking the subtrahend to the nearest multiple of ten” and then compensating strategy, e.g., to determine the difference of $48 – 19$, think $48 – 20 + 1$.
   ➢ Explain how to use the “thinking of addition” strategy, e.g., to determine the difference of $62 – 45$, think $45 + 5$, then $50 + 12$ and then $5 + 12$.
   ➢ Explain how to use the “using doubles” strategy, e.g., to determine the difference of $24 – 12$, think $12 + 12$.
   ➢ Apply a mental mathematics strategy for subtracting two given 2-digit numerals.

8. **Apply estimation strategies to predict sums and differences of two 2-digit numerals in a problem-solving context.**
   [C, ME, PS, R]  
   ➢ Estimate the solution for a given story problem involving the sum of two 2-digit numerals, e.g., to estimate the sum of $43 + 56$, use $40 + 50$; the sum is close to 90.
   ➢ Estimate the solution for a given story problem involving the difference of two 2-digit numerals, e.g., to estimate the difference of $56 – 23$, use $50 – 20$; the difference is close to 30.
### Grade 3
**Strand:** Number (continued)

#### General Outcome:
Develop number sense.

| 9. Demonstrate an understanding of addition and subtraction of numbers with answers to 1000 (limited to 1, 2 and 3-digit numerals) by:  
  - using personal strategies for adding and subtracting with and without the support of manipulatives  
  - creating and solving problems in contexts that involve addition and subtraction of numbers concretely, pictorially and symbolically.  
  [C, CN, ME, PS, R]  
  ➢ Model the addition of two or more given numbers using concrete or visual representations and record the process symbolically.  
  ➢ Model the subtraction of two given numbers using concrete or visual representations and record the process symbolically.  
  ➢ Create an addition or subtraction story problem for a given solution.  
  ➢ Determine the sum of two given numbers using a personal strategy, e.g., for 326 + 48, record 300 + 60 + 14.  
  ➢ Determine the difference of two given numbers using a personal strategy, e.g., for 127 – 38, record 38 + 2 + 80 + 7 or 127 – 20 – 10 – 8.  
  ➢ Solve a given problem involving the sum or difference of two given numbers. |
| 10. Apply mental mathematics strategies and number properties, such as:  
  - using doubles  
  - making 10  
  - using the commutative property  
  - using the property of zero  
  - thinking addition for subtraction to recall basic addition facts to 18 and related subtraction facts.  
  [C, CN, ME, R, V]  
  ➢ Describe a mental mathematics strategy that could be used to determine a given basic fact, such as:  
    - doubles, e.g., for 6 + 8, think 7 + 7  
    - doubles plus one, e.g., for 6 + 7, think 6 + 6 + 1  
    - doubles take away one, e.g., for 6 + 7, think 7 + 7 – 1  
    - doubles plus two, e.g., for 6 + 8, think 6 + 6 + 2  
    - doubles take away two, e.g., for 6 + 8, think 8 + 8 – 2  
    - making 10, e.g., for 6 + 8, think 6 + 4 + 4 or 8 + 2 + 4  
    - commutative property, e.g., for 3 + 9, think 9 + 3  
    - addition to subtraction, e.g., for 13 – 7, think 7 + ? = 13.  
  ➢ Provide a rule for determining answers for adding and subtracting zero.  
  ➢ Recall basic addition facts to 18 and related subtraction facts to solve problems. |
### Grade 3
**Strand: Number (continued)**

<table>
<thead>
<tr>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
<tbody>
<tr>
<td>(It is not intended that students recall the basic facts but become familiar with strategies to mentally determine products.)</td>
</tr>
<tr>

</tbody>
</table>

#### 11. Demonstrate an understanding of multiplication to $5 \times 5$ by:
- representing and explaining multiplication using equal grouping and arrays
- creating and solving problems in context that involve multiplication
- modelling multiplication using concrete and visual representations, and recording the process symbolically
- relating multiplication to repeated addition
- relating multiplication to division.

(C, CN, PS, R)

#### 12. Demonstrate an understanding of division by:
- representing and explaining division using equal sharing and equal grouping
- creating and solving problems in context that involve equal sharing and equal grouping
- modelling equal sharing and equal grouping using concrete and visual representations, and recording the process symbolically
- relating division to repeated subtraction
- relating division to multiplication.

(limited to division related to multiplication facts up to $5 \times 5$)

(C, CN, PS, R)

- Identify events from experience that can be described as equal sharing.
- Identify events from experience that can be described as equal grouping.
- Illustrate, with counters or a diagram, a given story problem involving equal sharing, presented orally or through shared reading and solve the problem.
- Illustrate, with counters or a diagram, a given story problem involving equal grouping, presented orally or through shared reading, and solve the problem.
- Listen to a story problem, represent the numbers using manipulatives or a sketch and record the problem with a number sentence.
- Create and illustrate with counters, a story problem for a given number sentence, e.g., given $6 \div 3$, create and illustrate a story problem.
- Represent a given division expression as repeated subtraction.
- Represent a given repeated subtraction as a division expression.
- Relate division to multiplication by using arrays and writing related number sentences.
- Solve a given problem involving division.

### Grade 3
**Strand:** Patterns and Relations (Patterns)

#### Specific Outcomes

*It is expected that students will:*

1. Demonstrate an understanding of increasing patterns by:
   - describing
   - extending
   - comparing
   - creating
   patterns using manipulatives, diagrams, sounds and actions (numbers to 1000).

[C, CN, PS, R, V]

#### General Outcome:

Use patterns to describe the world and solve problems.

#### Achievement Indicators

*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.*

- Describe a given increasing pattern by stating a pattern rule that includes the starting point and a description of how the pattern continues.
- Identify the pattern rule of a given increasing pattern and extend the pattern for the next three terms.
- Identify and explain errors in a given increasing pattern.
- Locate and describe various increasing patterns found on a hundred chart, such as horizontal, vertical and diagonal patterns.
- Compare numeric patterns of counting by 2s, 5s, 10s, 25s and 100s.
- Create a concrete, pictorial or symbolic representation of an increasing pattern for a given pattern rule.
- Create a concrete, pictorial or symbolic increasing pattern and describe the pattern rule.
- Solve a given problem using increasing patterns.
- Identify and describe increasing patterns in the environment.
- Identify and apply a pattern rule to determine missing elements for a given pattern.
- Describe the strategy used to determine missing elements in a given increasing pattern.
Grade 3
Strand: Patterns and Relations (Patterns) (continued)

2. Demonstrate an understanding of decreasing patterns by:
   - describing
   - extending
   - comparing
   - creating patterns using manipulatives, diagrams, sounds and actions (numbers to 1000).
[C, CN, PS, R, V]

General Outcome: Use patterns to describe the world and solve problems.

- Describe a given decreasing pattern by stating a pattern rule that includes the starting point and a description of how the pattern continues.
- Identify the pattern rule of a given decreasing pattern and extend the pattern for the next three terms.
- Identify and explain errors in a given decreasing pattern.
- Identify and describe various decreasing patterns found on a hundred chart, such as horizontal, vertical and diagonal patterns.
- Compare decreasing numeric patterns of counting backward by 2s, 5s, 10s, 25s and 100s.
- Create a concrete, pictorial or symbolic decreasing pattern for a given pattern rule.
- Create a concrete, pictorial or symbolic decreasing pattern and describe the pattern rule.
- Solve a given problem using decreasing patterns.
- Identify and describe decreasing patterns in the environment.
- Identify and apply a pattern rule to determine missing elements for a given pattern.
- Describe the strategy used to determine missing elements in a given decreasing pattern.

| 1. Relate the passage of time to common activities using non-standard and standard units (minutes, hours, days, weeks, months, years). [CN, ME, R] | | ➢ Select and use a non-standard unit of measure, such as television shows or pendulum swings, to measure the passage of time and explain the choice.  
➢ Identify activities that can or cannot be accomplished in minutes, hours, days, months and years.  
➢ Provide personal referents for minutes and hours. |
| 2. Relate the number of seconds to a minute, the number of minutes to an hour and the number of days to a month in a problem-solving context. [C, CN, PS, R, V] | | ➢ Determine the number of days in any given month using a calendar.  
➢ Solve a given problem involving the number of minutes in an hour or the number of days in a given month.  
➢ Create a calendar that includes days of the week, dates and personal events. |
| 3. Demonstrate an understanding of measuring length (cm, m) by:  
• selecting and justifying referents for the units cm and m  
• modelling and describing the relationship between the units cm and m  
• estimating length using referents  
• measuring and recording length, width and height. [C, CN, ME, PS, R, V] | | ➢ Provide a personal referent for one centimetre and explain the choice.  
➢ Provide a personal referent for one metre and explain the choice.  
➢ Match a given standard unit to a given referent.  
➢ Show that 100 centimetres is equivalent to 1 metre by using concrete materials.  
➢ Estimate the length of an object using personal referents.  
➢ Determine and record the length and width of a given 2-D shape.  
➢ Determine and record the length, width or height of a given 3-D object.  
➢ Draw a line segment of a given length using a ruler.  
➢ Sketch a line segment of a given length without using a ruler. |
### Grade 3

#### Strand: Shape and Space (Measurement) (continued)

1. **Provide a personal referent for one gram and explain the choice.**
2. **Provide a personal referent for one kilogram and explain the choice.**
3. **Match a given standard unit to a given referent.**
4. **Explain the relationship between 1000 grams and 1 kilogram using a model.**
5. **Estimate the mass of a given object using personal referents.**
6. **Determine and record the mass of a given 3-D object.**
7. **Measure, using a scale, and record the mass of given everyday objects using the units g and kg.**
8. **Provide examples of 3-D objects that have a mass of approximately 1g, 100g and 1kg.**
9. **Determine the mass of two given similar objects with different masses and explain the results.**
10. **Determine the mass of an object, change its shape, re-measure its mass and explain the results.**

1. Represent and describe whole numbers to 10 000, pictorially and symbolically. [C, CN, V]  
- Read a given four-digit numeral without using the word “and,” e.g., 5321 is five thousand three hundred twenty one, NOT five thousand three hundred AND twenty one.  
- Write a given numeral using proper spacing without commas, e.g., 4567 or 4 567, 10 000.  
- Write a given numeral 0 – 10 000 in words.  
- Represent a given numeral using a place value chart or diagrams.  
- Describe the meaning of each digit in a given numeral.  
- Express a given numeral in expanded notation, e.g., 321 = 300 + 20 + 1.  
- Write the numeral represented by a given expanded notation.  
- Explain and show the meaning of each digit in a given 4-digit numeral with all digits the same, e.g., for the numeral 2222, the first digit represents two thousands, the second digit two hundreds, the third digit two tens and the fourth digit two ones.  

2. Compare and order numbers to 10 000. [C, CN]  
- Order a given set of numbers in ascending or descending order and explain the order by making references to place value.  
- Create and order three different 4-digit numerals.  
- Identify the missing numbers in an ordered sequence or on a number line.  
- Identify incorrectly placed numbers in an ordered sequence or on a number line.
## Grade 4

| 4. **Explain the properties of 0 and 1 for multiplication, and the property of 1 for division.** [C, CN, R] | ➢ **Explain the property for determining the answer when multiplying numbers by one.**<br>➢ **Explain the property for determining the answer when multiplying numbers by zero.**<br>➢ **Explain the property for determining the answer when dividing numbers by one.** | [C, CN, ME, PS, R] |

<p>| 5. <strong>Describe and apply mental mathematics strategies, such as:</strong> | ➢ <strong>Provide examples for applying mental mathematics strategies:</strong>&lt;br&gt;• doubling, e.g., for $4 \times 3$, think $2 \times 3 = 6$, and $4 \times 3 = 6 + 6$&lt;br&gt;• doubling and adding one more group, e.g., for $3 \times 7$, think $2 \times 7 = 14$, and $14 + 7 = 21$&lt;br&gt;• use ten facts when multiplying by 9, e.g., for $9 \times 6$, think $10 \times 6 = 60$, and $60 - 6 = 54$; for $7 \times 9$, think $7 \times 10 = 70$, and $70 - 7 = 63$&lt;br&gt;• halving, e.g., if $4 \times 6$ is equal to 24, then $2 \times 6$ is equal to 12&lt;br&gt;• relating division to multiplication, e.g., for $64 \div 8$, think $8 \times \square = 64$. | [C, CN, ME, PS, R] |
| ➢ skip counting from a known fact | | |
| ➢ using doubling or halving | | |
| ➢ using doubling or halving and adding or subtracting one more group | | |
| ➢ using patterns in the 9s facts | | |
| ➢ using repeated doubling to determine basic multiplication facts to $9 \times 9$ and related division facts. | | [C, CN, ME, PS, R] |</p>
<table>
<thead>
<tr>
<th>Grade 4</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>

### Strand: Number (continued)

#### 6. Demonstrate an understanding of multiplication (2- or 3-digit by 1-digit) to solve problems by:
- using personal strategies for multiplication with and without concrete materials
- using arrays to represent multiplication
- connecting concrete representations to symbolic representations
- estimating products.  
  [C, CN, ME, PS, R, V]

- Model a given multiplication problem using the distributive property, e.g., $8 \times 365 = (8 \times 300) + (8 \times 60) + (8 \times 5)$.
- Use concrete materials, such as base ten blocks or their pictorial representations, to represent multiplication and record the process symbolically.
- Create and solve a multiplication problem that is limited to 2- or 3-digits by 1-digit.
- Estimate a product using a personal strategy, e.g., $2 \times 243$ is close to or a little more than $2 \times 200$, or close to or a little less than $2 \times 250$.
- Model and solve a given multiplication problem using an array and record the process.
- Solve a given multiplication problem and record the process.

#### 7. Demonstrate an understanding of division (1-digit divisor and up to 2-digit dividend) to solve problems by:
- using personal strategies for dividing with and without concrete materials
- estimating quotients
- relating division to multiplication.  
  [C, CN, ME, PS, R, V]

(It is not intended that remainders be expressed as decimals or fractions.)

- Solve a given division problem without a remainder using arrays or base ten materials.
- Solve a given division problem with a remainder using arrays or base ten materials.
- Solve a given division problem using a personal strategy and record the process.
- Create and solve a word problem involving a 1- or 2-digit dividend.
- Estimate a quotient using a personal strategy, e.g., $86 \div 4$ is close to $80 \div 4$ or close to $80 \div 5$.

<tr>
<td>&amp;</td>
<td>Represent a given decimal using money values (dimes and pennies).</td>
</tr>
<tr>
<td>&amp;</td>
<td>Record a given money value using decimals.</td>
</tr>
<tr>
<td>&amp;</td>
<td>Provide examples of everyday contexts in which tenths and hundredths are used.</td>
</tr>
<tr>
<td>&amp;</td>
<td>Model, using manipulatives or pictures, that a given tenth can be expressed as hundredths, e.g., 0.9 is equivalent to 0.90 or 9 dimes is equivalent to 90 pennies.</td>
</tr>
<tr>
<td><strong>Grade 4</strong></td>
<td><strong>Strand:</strong> Number (continued)</td>
</tr>
<tr>
<td>-----------</td>
<td>-----------------------------</td>
</tr>
</tbody>
</table>
| 10. Relate decimals to fractions (to hundredths). [CN, R, V] | ➢ Read decimals as fractions, e.g., 0.5 is zero and five tenths.  
➢ Express orally and in written form a given decimal in fractional form.  
➢ Express orally and in written form a given fraction with a denominator of 10 or 100 as a decimal.  
➢ Express a given pictorial or concrete representation as a fraction or decimal, e.g., 15 shaded squares on a hundred grid can be expressed as 0.15 or \(\frac{15}{100}\).  
➢ Express orally and in written form the decimal equivalent for a given fraction, e.g., \(\frac{50}{100}\) can be expressed as 0.50. |  

11. Demonstrate an understanding of addition and subtraction of decimals (limited to hundredths) by:  
• using compatible numbers  
• estimating sums and differences  
➢ Solve problems, including money problems, which involve addition and subtraction of decimals, limited to hundredths.  
➢ Determine the approximate solution of a given problem not requiring an exact answer.  
➢ Estimate a sum or difference using compatible numbers.  
➢ Count back change for a given purchase. |
### Grade 4
**Strand:** Patterns and Relations (Patterns)

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General Outcome:</strong> Use patterns to describe the world and solve problems.</td>
<td><strong>Achievement Indicators</strong> may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. Identify and describe patterns found in tables and charts, including a multiplication chart. [C, CN, PS, V]
   - Identify and describe a variety of patterns in a multiplication chart.
   - Determine the missing element(s) in a given table or chart.
   - Identify error(s) in a given table or chart.
   - Describe the pattern found in a given table or chart.

2. Reproduce a pattern shown in a table or chart using concrete materials. [C, CN, V]
   - Create a concrete representation of a given pattern displayed in a table or chart.
   - Explain why the same relationship exists between the pattern in a table and its concrete representation.

3. Represent and describe patterns and relationships using charts and tables to solve problems. [C, CN, PS, R, V]
   - Extend patterns found in a table or chart to solve a given problem.
   - Translate the information provided in a given problem into a table or chart.
   - Identify and extend the patterns in a table or chart to solve a given problem.

4. Identify and explain mathematical relationships using charts and diagrams to solve problems. [CN, PS, R, V]
   - Complete a Carroll diagram by entering given data into correct squares to solve a given problem.
   - Determine where new elements belong in a given Carroll diagram.
   - Solve a given problem using a Carroll diagram.
   - Identify a sorting rule for a given Venn diagram.
   - Describe the relationship shown in a given Venn diagram when the circles intersect, when one circle is contained in the other and when the circles are separate.
   - Determine where new elements belong in a given Venn diagram.
   - Solve a given problem by using a chart or diagram to identify mathematical relationships.
<table>

</table>

5. Express a given problem as an equation in which a symbol is used to represent an unknown number. [CN, PS, R]

- Explain the purpose of the symbol, such as a triangle or circle, in a given addition, subtraction, multiplication or division equation with one unknown, e.g. \(36 \div \square = 6\)
- Express a given pictorial or concrete representation of an equation in symbolic form.
- Identify the unknown in a story problem, represent the problem with an equation and solve the problem concretely, pictorially or symbolically.
- Create a problem in context for a given equation with one unknown.

6. Solve one-step equations involving a symbol to represent an unknown number. [C, CN, PS, R, V]

- Solve a given one-step equation using manipulatives.
- Solve a given one-step equation using guess and test.
- Describe, orally, the meaning of a given one-step equation with one unknown.
- Solve a given equation when the unknown is on the left or right side of the equation.
- Represent and solve a given addition or subtraction problem involving a “part-part-whole” or comparison context using a symbol to represent the unknown.
- Represent and solve a given multiplication or division problem involving equal grouping or partitioning (equal sharing) using symbols to represent the unknown.
### Grade 4

</table>
| 5. Demonstrate an understanding of line symmetry by:  
  • identifying symmetrical 2-D shapes  
  • creating symmetrical 2-D shapes  
  • drawing one or more lines of symmetry in a 2-D shape.  
  [C, CN, V] | ➢ Sort a given set of 2-D shapes as symmetrical and non-symmetrical. |
<p>| | ➢ Complete a symmetrical 2-D shape given half the shape and its line of symmetry. |
| | ➢ Identify lines of symmetry of a given set of 2-D shapes and explain why each shape is symmetrical. |
| | ➢ Determine whether or not a given 2-D shape is symmetrical by using a Mira or by folding and superimposing. |
| | ➢ Create a symmetrical shape with and without manipulatives. |
| | ➢ Provide examples of symmetrical shapes found in the environment and identify the line(s) of symmetry. |
| | ➢ Sort a given set of 2-D shapes as those that have no lines of symmetry, one line of symmetry or more than one line of symmetry. |</p>
<table>
<thead>
<tr>
<th>Grade 4</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Strand:</strong> Statistics and Probability (Data Analysis)</td>
</tr>
</tbody>
</table>

### General Outcome:
Collect, display and analyze data to solve problems.

### Specific Outcomes
*It is expected that students will:*

1. Demonstrate an understanding of many-to-one correspondence.
   
   - [C, R, T, V]

2. Construct and interpret pictographs and bar graphs involving many-to-one correspondence to draw conclusions.
   
   - [C, PS, R, V]

### Achievement Indicators
*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.*

- Compare graphs in which different intervals or correspondences are used and explain why the interval or correspondence was used.
- Compare graphs in which the same data has been displayed using one-to-one and many-to-one correspondences, and explain how they are the same and different.
- Explain why many-to-one correspondence is sometimes used rather than one-to-one correspondence.
- Find examples of graphs in which many-to-one correspondence is used in print and electronic media, such as newspapers, magazines and the Internet, and describe the correspondence used.

- Identify an interval and correspondence for displaying a given set of data in a graph and justify the choice.
- Create and label (with categories, title and legend) a pictograph to display a given set of data using many-to-one correspondence, and justify the choice of correspondence used.
- Create and label (with axes and title) a bar graph to display a given set of data using many-to-one correspondence, and justify the choice of interval used.
- Answer a given question using a given graph in which data is displayed using many-to-one correspondence.
**Grade 5**  
**Strand:** Number

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>
| **1.** Represent and describe whole numbers to 1 000 000.  
[C, CN, V, T] | It is expected that students will:  
- Write a given numeral using proper spacing without commas, e.g., 934 567.  
- Describe the pattern of adjacent place positions moving from right to left.  
- Describe the meaning of each digit in a given numeral.  
- Provide examples of large numbers used in print or electronic media.  
- Express a given numeral in expanded notation, e.g., 45 321 = (4 \times 10 000) + (5 \times 1000) + (3 \times 100) + (2 \times 10) + (1 \times 1) or 40 000 + 5000 + 300 + 20 + 1.  
- Write the numeral represented by a given expanded notation. |
| **2.** Use estimation strategies including:  
- front-end rounding  
- compensation  
- compatible numbers  
in problem-solving contexts.  
[C, CN, ME, PS, R, V] | Provide a context for when estimation is used to:  
- make predictions  
- check reasonableness of an answer  
- determine approximate answers.  
- Describe contexts in which overestimating is important.  
- Determine the approximate solution to a given problem not requiring an exact answer.  
- Estimate a sum or product using compatible numbers.  
- Estimate the solution to a given problem using compensation and explain the reason for compensation.  
- Select and use an estimation strategy for a given problem.  
- Apply front-end rounding to estimate:  
  - sums, e.g., 253 + 615 is more than 200 + 600 = 800  
  - differences, e.g., 974 – 250 is close to 900 – 200 = 700  
  - products, e.g., the product of 23 \times 24 is greater than 20 \times 20 (400) and less than 25 \times 25 (625)  
  - quotients, e.g., the quotient of 831 \div 4 is greater than 800 \div 4 (200). |
### Grade 5
**Strand:** Number (continued)

#### General Outcome: Develop number sense.

### Grade 5

**Strand:** Number (continued)

<table>
<thead>
<tr>
<th>General Outcome:</th>
<th>Develop number sense.</th>
</tr>
</thead>
</table>

#### 5. Demonstrate an understanding of multiplication (2-digit by 2-digit) to solve problems. [C, CN, PS, V]
- Illustrate partial products in expanded notation for both factors, e.g., for $36 \times 42$, determine the partial products for $(30 + 6) \times (40 + 2)$.
- Represent both 2-digit factors in expanded notation to illustrate the distributive property, e.g., to determine the partial products of $36 \times 42$, $(30 + 6) \times (40 + 2) = 30 \times 40 + 30 \times 2 + 6 \times 40 + 6 \times 2 = 1200 + 60 + 240 + 12 = 1512$.
- Model the steps for multiplying 2-digit factors using an array and base ten blocks, and record the process symbolically.
- Describe a solution procedure for determining the product of two given 2-digit factors using a pictorial representation, such as an area model.
- Solve a given multiplication problem in context using personal strategies and record the process.

#### 6. Demonstrate, with and without concrete materials, an understanding of division (3-digit by 1-digit) and interpret remainders to solve problems. [C, CN, PS]
- Model the division process as equal sharing using base ten blocks and record it symbolically.
- Explain that the interpretation of a remainder depends on the context:
  - ignore the remainder, e.g., making teams of 4 from 22 people
  - round up the quotient, e.g., the number of five passenger cars required to transport 13 people
  - express remainders as fractions, e.g., five apples shared by two people
  - express remainders as decimals, e.g., measurement and money.
- Solve a given division problem in context using personal strategies and record the process.

#### 7. Demonstrate an understanding of fractions by using concrete and pictorial representations to:
- create sets of equivalent fractions
- compare fractions with like and unlike denominators. [C, CN, PS, R, V]
- Create a set of equivalent fractions and explain why there are many equivalent fractions for any given fraction using concrete materials.
- Model and explain that equivalent fractions represent the same quantity.
- Determine if two given fractions are equivalent using concrete materials or pictorial representations.
- Formulate and verify a rule for developing a set of equivalent fractions.
- Identify equivalent fractions for a given fraction.
- Compare two given fractions with unlike denominators by creating equivalent fractions.
- Position a given set of fractions with like and unlike denominators on a number line and explain strategies used to determine the order.
### Grade 5

**Strand:** Number (continued)

<table>
<thead>
<tr>
<th>Outcome</th>
<th>Description</th>
</tr>
</thead>
</table>
| **8.** Describe and represent decimals (tenths, hundredths, thousandths) concretely, pictorially and symbolically. | - Write the decimal for a given concrete or pictorial representation of part of a set, part of a region or part of a unit of measure.  
- Represent a given decimal using concrete materials or a pictorial representation.  
- Represent an equivalent tenth, hundredth or thousandth for a given decimal using a grid.  
- Express a given tenth as an equivalent hundredth and thousandth.  
- Express a given hundredth as an equivalent thousandth.  
- Describe the value of each digit in a given decimal. |
| **9.** Relate decimals to fractions (to thousandths). | - Write a given decimal in fractional form.  
- Write a given fraction with a denominator of 10, 100 or 1000 as a decimal.  
- Express a given pictorial or concrete representation as a fraction or decimal, e.g., 250 shaded squares on a thousandth grid can be expressed as 0.250 or \(\frac{250}{1000}\). |
| **10.** Compare and order decimals (to thousandths) by using: | - Order a given set of decimals by placing them on a number line that contains benchmarks, 0.0, 0.5, 1.0.  
- Order a given set of decimals including only tenths using place value.  
- Order a given set of decimals including only hundredths using place value.  
- Order a given set of decimals including only thousandths using place value.  
- Explain what is the same and what is different about 0.2, 0.20 and 0.200.  
- Order a given set of decimals including tenths, hundredths and thousandths using equivalent decimals. |
| **11.** Demonstrate an understanding of addition and subtraction of decimals (limited to thousandths). | - Place the decimal point in a sum or difference using front-end estimation, e.g., for 6.3 + 0.25 + 306.158, think 6 + 306, so the sum is greater than 312.  
- Correct errors of decimal point placements in sums and differences without using paper and pencil.  
- Explain why keeping track of place value positions is important when adding and subtracting decimals.  
- Predict sums and differences of decimals using estimation strategies.  
- Solve a given problem that involves addition and subtraction of decimals, limited to thousandths. |
### Grade 5
**Strand:** Patterns and Relations (Patterns)

<table>

</tr>
</thead>
<tbody>
<tr>
<td>It is expected that students will:</td>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
<td></td>
</tr>
<tr>
<td>1. Determine the pattern rule to make predictions about subsequent elements. [C, CN, PS, R, V]</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Extend a given pattern with and without concrete materials, and explain how each element differs from the proceeding one.
- Describe, orally or in writing, a given pattern using mathematical language, such as one more, one less, five more.
- Write a mathematical expression to represent a given pattern, such as \( r + 1, r - 1, r + 5 \)
- Describe the relationship in a given table or chart using a mathematical expression.
- Determine and explain why a given number is or is not the next element in a pattern.
- Predict subsequent elements in a given pattern.
- Solve a given problem by using a pattern rule to determine subsequent elements.
- Represent a given pattern visually to verify predictions.

### Specific Outcomes

**It is expected that students will:**

#### 1. Design and construct different rectangles given either perimeter or area, or both (whole numbers) and draw conclusions.

- [C, CN, PS, R, V]

#### 2. Demonstrate an understanding of measuring length (mm) by:
- selecting and justifying referents for the unit mm
- modelling and describing the relationship between mm and cm units, and between mm and m units.

- [C, CN, ME, PS, R, V]

### Achievement Indicators

The following set of indicators may be used to determine whether students have met the corresponding specific outcome.

- Construct or draw two or more rectangles for a given perimeter in a problem-solving context.
- Construct or draw two or more rectangles for a given area in a problem-solving context.
- Illustrate that for any given perimeter, the square or shape closest to a square will result in the greatest area.
- Illustrate that for any given perimeter, the rectangle with the smallest possible width will result in the least area.
- Provide a real-life context for when it is important to consider the relationship between area and perimeter.

- Provide a referent for one millimetre and explain the choice.
- Provide a referent for one centimetre and explain the choice.
- Provide a referent for one metre and explain the choice.
- Show that 10 millimetres is equivalent to 1 centimetre using concrete materials, e.g., ruler.
- Show that 1000 millimetres is equivalent to 1 metre using concrete materials, e.g., metre stick.
- Provide examples of when millimetres are used as the unit of measure.
### Grade 5

| 8. Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors). [C, CN, ME, PS, R, V] | ➢ Place the decimal point in a product using front-end estimation, e.g., for 15.205 m × 4, think 15 m × 4, so the product is greater than 60 m.  
 ➢ Place the decimal point in a quotient using front-end estimation, e.g., for $26.83 ÷ 4$, think $24 ÷ 4$, so the quotient is greater than $6$.  
 ➢ Correct errors of decimal point placement in a given product or quotient without using paper and pencil.  
 ➢ Predict products and quotients of decimals using estimation strategies.  
 ➢ Solve a given problem that involves multiplication and division of decimals using multipliers from 0 to 9 and divisors from 1 to 9. |
| 9. Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers). [CN, ME, PS, T] | ➢ Demonstrate and explain with examples why there is a need to have a standardized order of operations.  
 ➢ Apply the order of operations to solve multi-step problems with or without technology, e.g., computer, calculator. |
## Grade 6
**Strand:** Patterns and Relations (Patterns)

### Specific Outcomes

It is expected that students will:

1. Demonstrate an understanding of the relationships within tables of values to solve problems.  
   [C, CN, PS, R]

   - Generate values in one column of a table of values, given values in the other column and a pattern rule.
   - State, using mathematical language, the relationship in a given table of values.
   - Create a concrete or pictorial representation of the relationship shown in a table of values.
   - Predict the value of an unknown term using the relationship in a table of values and verify the prediction.
   - Formulate a rule to describe the relationship between two columns of numbers in a table of values.
   - Identify missing elements in a given table of values.
   - Identify errors in a given table of values.
   - Describe the pattern within each column of a given table of values.
   - Create a table of values to record and reveal a pattern to solve a given problem.

2. Represent and describe patterns and relationships using graphs and tables.  
   [C, CN, ME, PS, R, V]

   - Translate a pattern to a table of values and graph the table of values (limit to linear graphs with discrete elements).
   - Create a table of values from a given pattern or a given graph.
   - Describe, using everyday language, orally or in writing, the relationship shown on a graph.

### General Outcome:

Use patterns to describe the world and solve problems.

### Achievement Indicators

The following set of indicators may be used to determine whether students have met the corresponding specific outcome.
## Grade 6

**Strand:** Patterns and Relations  
(Variables and Equations)

**General Outcome:** Represent algebraic expressions in multiple ways.

### Specific Outcomes

*It is expected that students will:*

### Achievement Indicators

</thead>
</table>
| Represent generalizations arising from number relationships using equations with letter variables. [C, CN, PS, R, V] | Write and explain the formula for finding the perimeter of any given rectangle.  
Write and explain the formula for finding the area of any given rectangle.  
Develop and justify equations using letter variables that illustrate the commutative property of addition and multiplication, e.g., \( a + b = b + a \) or \( a \times b = b \times a \).  
Describe the relationship in a given table using a mathematical expression.  
Represent a pattern rule using a simple mathematical expression, such as \( 4d \) or \( 2n + 1 \). |
| Demonstrate and explain the meaning of preservation of equality concretely, pictorially and symbolically. [C, CN, PS, R, V] | Model the preservation of equality for addition using concrete materials, such as a balance or using pictorial representations and orally explain the process.  
Model the preservation of equality for subtraction using concrete materials, such as a balance or using pictorial representations and orally explain the process.  
Model the preservation of equality for multiplication using concrete materials, such as a balance or using pictorial representations and orally explain the process.  
Model the preservation of equality for division using concrete materials, such as a balance or using pictorial representations and orally explain the process.  
Write equivalent forms of a given equation by applying the preservation of equality and verify using concrete materials, e.g., \( 3b = 12 \) is the same as \( 3b + 5 = 12 + 5 \) or \( 2r = 7 \) is the same as \( 3(2r) = 3(7) \). |
<table>

<th>Grade 6</th>
<th>General Outcome: Use direct or indirect measurement to solve problems.</th>
</tr>
</thead>
</table>
| Strand: Shape and Space (Measurement) | Specific Outcomes  

It is expected that students will:  

1. Demonstrate an understanding of angles by:  
   - identifying examples of angles in the environment  
   - classifying angles according to their measure  
   - estimating the measure of angles using 45°, 90° and 180° as reference angles  
   - determining angle measures in degrees  
   - drawing and labelling angles when the measure is specified.  

[C, CN, ME, V]  

2. Demonstrate that the sum of interior angles is:  
   - 180° in a triangle  
   - 360° in a quadrilateral.  

[C, R]  

Achievement Indicators  
The following set of indicators may be used to determine whether students have met the corresponding specific outcome.  

- Provide examples of angles found in the environment.  
- Classify a given set of angles according to their measure, e.g., acute, right, obtuse, straight, reflex.  
- Sketch 45°, 90° and 180° angles without the use of a protractor, and describe the relationship among them.  
- Estimate the measure of an angle using 45°, 90° and 180° as reference angles.  
- Measure, using a protractor, given angles in various orientations.  
- Draw and label a specified angle in various orientations using a protractor.  
- Describe the measure of an angle as the measure of rotation of one of its sides.  
- Describe the measure of angles as the measure of an interior angle of a polygon.  

- Explain, using models, that the sum of the interior angles of a triangle is the same for all triangles.  
- Explain, using models, that the sum of the interior angles of a quadrilateral is the same for all quadrilaterals.

| 1. Create, label and interpret line graphs to draw conclusions.  
[C, CN, PS, R, V] | ➢ Determine the common attributes (title, axes and intervals) of line graphs by comparing a given set of line graphs.  
➢ Determine whether a given set of data can be represented by a line graph (continuous data) or a series of points (discrete data) and explain why.  
➢ Create a line graph from a given table of values or set of data.  
➢ Interpret a given line graph to draw conclusions. | |
| 2. Select, justify and use appropriate methods of collecting data, including:  
• questionnaires  
• experiments  
• databases  
• electronic media.  
[C, PS, T] | ➢ Select a method for collecting data to answer a given question and justify the choice.  
➢ Design and administer a questionnaire for collecting data to answer a given question, and record the results.  
➢ Answer a given question by performing an experiment, recording the results and drawing a conclusion.  
➢ Explain when it is appropriate to use a database as a source of data.  
➢ Gather data for a given question by using electronic media including selecting data from databases. | |
| 3. Graph collected data and analyze the graph to solve problems.  
[C, CN, PS] | ➢ Determine an appropriate type of graph for displaying a set of collected data and justify the choice of graph.  
➢ Solve a given problem by graphing data and interpreting the resulting graph. | |
## Grade 6
**Strand:** Statistics and Probability (Chance and Uncertainty)

**General Outcome:** Use experimental or theoretical probabilities to represent and solve problems involving uncertainty.

### Specific Outcomes
*It is expected that students will:*

4. Demonstrate an understanding of probability by:
   - identifying all possible outcomes of a probability experiment
   - differentiating between experimental and theoretical probability
   - determining the theoretical probability of outcomes in a probability experiment
   - determining the experimental probability of outcomes in a probability experiment
   - comparing experimental results with the theoretical probability for an experiment.

### Achievement Indicators
*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.*

- List the possible outcomes of a probability experiment, such as:
  - tossing a coin
  - rolling a die with a given number of sides
  - spinning a spinner with a given number of sectors.
- Determine the theoretical probability of an outcome occurring for a given probability experiment.
- Predict the probability of a given outcome occurring for a given probability experiment by using theoretical probability.
- Conduct a probability experiment, with or without technology, and compare the experimental results to the theoretical probability.
- Explain that as the number of trials in a probability experiment increases, the experimental probability approaches theoretical probability of a particular outcome.
- Distinguish between theoretical probability and experimental probability, and explain the differences.
### Grade 7

**Strand:** Number

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>General Outcome: Develop number sense.</th>
</tr>
</thead>
</table>
| **It is expected that students will:**                                            | **Achievement Indicators**  
*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.* |
| 1. Determine and explain why a number is divisible by 2, 3, 4, 5, 6, 8, 9 or 10, and why a number cannot be divided by 0. [C, R] | ➢ Determine if a given number is divisible by 2, 3, 4, 5, 6, 8, 9 or 10 and explain why.  
➢ Sort a given set of numbers based upon their divisibility using organizers, such as Venn and Carroll diagrams.  
➢ Determine the factors of a given number using the divisibility rules.  
➢ Explain, using an example, why numbers cannot be divided by 0. |
| 2. Demonstrate an understanding of the addition, subtraction, multiplication and division of decimals (for more than 1-digit divisors or 2-digit multipliers, the use of technology is expected) to solve problems. [ME, PS, T] | ➢ Solve a given problem involving the addition of two or more decimal numbers.  
➢ Solve a given problem involving the subtraction of decimal numbers.  
➢ Solve a given problem involving the multiplication of decimal numbers.  
➢ Solve a given problem involving the multiplication or division of decimal numbers with 2-digit multipliers or 1-digit divisors (whole numbers or decimals) without the use of technology.  
➢ Solve a given problem involving the multiplication or division of decimal numbers with more than a 2-digit multiplier or 1-digit divisor (whole number or decimal), with the use of technology.  
➢ Place the decimal in a sum or difference using front-end estimation, e.g., for $4.5 + 0.73 + 256.458$, think $4 + 256$, so the sum is greater than 260.  
➢ Place the decimal in a product using front-end estimation, e.g., for $12.33 \times 2.4$, think $12 \times 2$, so the product is greater than $24$.  
➢ Place the decimal in a quotient using front-end estimation, e.g., for $51.50 \div 2.1$, think $50 \div 2$, so the quotient is approximately 25 m.  
➢ Check the reasonableness of solutions using estimation.  
➢ Solve a given problem that involves operations on decimals (limited to thousandths) taking into consideration the order of operations. |

#### 1. Demonstrate an understanding of circles by:
- describing the relationships among radius, diameter and circumference of circles
- relating circumference to \( \pi \)
- determining the sum of the central angles
- constructing circles with a given radius or diameter
- solving problems involving the radii, diameters and circumferences of circles.

**Achievement Indicators**
- Illustrate and explain that the diameter is twice the radius in a given circle.
- Illustrate and explain that the circumference is approximately three times the diameter in a given circle.
- Explain that, for all circles, \( \pi \) is the ratio of the circumference to the diameter \( \left( \frac{C}{d} \right) \), and its value is approximately 3.14.
- Explain, using an illustration, that the sum of the central angles of a circle is 360°.
- Draw a circle with a given radius or diameter with and without a compass.
- Solve a given contextual problem involving circles.

#### 2. Develop and apply a formula for determining the area of:
- triangles
- parallelograms
- circles.

**Achievement Indicators**
- Illustrate and explain how the area of a rectangle can be used to determine the area of a triangle.
- Generalize a rule to create a formula for determining the area of triangles.
- Illustrate and explain how the area of a rectangle can be used to determine the area of a parallelogram.
- Generalize a rule to create a formula for determining the area of parallelograms.
- Illustrate and explain how to estimate the area of a circle without the use of a formula.
- Apply a formula for determining the area of a given circle.
- Solve a given problem involving the area of triangles, parallelograms and/or circles.
### Grade 7
**Strand:** Shape and Space (3-D objects and 2-D shapes)

### Specific Outcomes

*It is expected that students will:*

3. Perform geometric constructions, including:
   - perpendicular line segments
   - parallel line segments
   - perpendicular bisectors
   - angle bisectors.

[CN, R, V]

### General Outcome:

Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.

### Achievement Indicators

The following set of indicators may be used to determine whether students have met the corresponding specific outcome.

- Describe examples of parallel line segments, perpendicular line segments, perpendicular bisectors and angle bisectors in the environment.
- Identify line segments on a given diagram that are parallel or perpendicular.
- Draw a line segment perpendicular to another line segment and explain why they are perpendicular.
- Draw a line segment parallel to another line segment and explain why they are parallel.
- Draw the bisector of a given angle using more than one method and verify that the resulting angles are equal.
- Draw the perpendicular bisector of a line segment using more than one method and verify the construction.
## Grade 7
**Strand:** Shape and Space (Transformations)

### General Outcome:
Describe and analyze position and motion of objects and shapes.

### Specific Outcomes

#### It is expected that students will:

4. Identify and plot points in the four quadrants of a Cartesian plane using integral ordered pairs.
   [C, CN, V]

   - Label the axes of a four quadrant Cartesian plane and identify the origin.
   - Identify the location of a given point in any quadrant of a Cartesian plane using an integral ordered pair.
   - Plot the point corresponding to a given integral ordered pair on a Cartesian plane with units of 1, 2, 5 or 10 on its axes.
   - Draw shapes and designs, using given integral ordered pairs, in a Cartesian plane.
   - Create shapes and designs, and identify the points used to produce the shapes and designs in any quadrant of a Cartesian plane.

5. Perform and describe transformations (translations, rotations or reflections) of a 2-D shape in all four quadrants of a Cartesian plane (limited to integral number vertices).
   [CN, PS, T, V]

   (It is intended that the original shape and its image have vertices with integral coordinates.)

   - Identify the coordinates of the vertices of a given 2-D shape on a Cartesian plane.
   - Describe the horizontal and vertical movement required to move from a given point to another point on a Cartesian plane.
   - Describe the positional change of the vertices of a given 2-D shape to the corresponding vertices of its image as a result of a transformation or successive transformations on a Cartesian plane.
   - Determine the distance between points along horizontal and vertical lines in a Cartesian plane.
   - Perform a transformation or consecutive transformations on a given 2-D shape and identify coordinates of the vertices of the image.
   - Describe the positional change of the vertices of a 2-D shape to the corresponding vertices of its image as a result of a transformation or a combination of successive transformations.
   - Describe the image resulting from the transformation of a given 2-D shape on a Cartesian plane by identifying the coordinates of the vertices of the image.
**Grade 7**  
**Strand:** Statistics and Probability  
(Data Analysis)

**General Outcome:** Collect, display and analyze data to solve problems.

### Specific Outcomes

**It is expected that students will:**

<table>
<thead>
<tr>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. Demonstrate an understanding of central tendency and range by:
   - determining the measures of central tendency (mean, median, mode) and range
   - determining the most appropriate measures of central tendency to report findings.  
   \[C, \text{PS, R, T}\]

   - Determine mean, median and mode for a given set of data, and explain why these values may be the same or different.
   - Determine the range of given sets of data.
   - Provide a context in which the mean, median or mode is the most appropriate measure of central tendency to use when reporting findings.
   - Solve a given problem involving the measures of central tendency.

2. Determine the effect on the mean, median and mode when an outlier is included in a data set.  
   \[C, \text{CN, PS, R}\]

   - Analyze a given set of data to identify any outliers.
   - Explain the effect of outliers on the measures of central tendency for a given data set.
   - Identify outliers in a given set of data and justify whether or not they are to be included in the reporting of the measures of central tendency.
   - Provide examples of situations in which outliers would and would not be used in reporting the measures of central tendency.

3. Construct, label and interpret circle graphs to solve problems.  
   \[C, \text{CN, PS, R, T, V}\]

   - Identify common attributes of circle graphs, such as:
     - title, label or legend
     - the sum of the central angles is 360°
     - the data is reported as a percent of the total and the sum of the percents is equal to 100%.
   - Create and label a circle graph, with and without technology, to display a given set of data.
   - Find and compare circle graphs in a variety of print and electronic media, such as newspapers, magazines and the Internet.
   - Translate percentages displayed in a circle graph into quantities to solve a given problem.
   - Interpret a given circle graph to answer questions.

</table>

1. Demonstrate an understanding of perfect square and square root, concretely, pictorially and symbolically (limited to whole numbers).  
[C, CN, R, V]

- Represent a given perfect square as a square region using materials, such as grid paper or square shapes.
- Determine the factors of a given perfect square, and explain why one of the factors is the square root and the others are not.
- Determine whether or not a given number is a perfect square using materials and strategies, such as square shapes, grid paper or prime factorization, and explain the reasoning.
- Determine the square root of a given perfect square and record it symbolically.
- Determine the square of a given number.

2. Determine the approximate square root of numbers that are not perfect squares (limited to whole numbers).  
[C, CN, ME, R, T]

- Estimate the square root of a given number that is not a perfect square using the roots of perfect squares as benchmarks.
- Approximate the square root of a given number that is not a perfect square using technology, e.g., calculator, computer.
- Explain why the square root of a number shown on a calculator may be an approximation.
- Identify a number with a square root that is between two given numbers.

Grade 8
Strand: Number (continued)

General Outcome: Develop number sense.

7. Demonstrate an understanding of multiplication and division of integers, concretely, pictorially and symbolically.
   [C, CN, PS, R, V]

- Identify the operation required to solve a given problem involving integers.
- Provide a context that requires multiplying two integers.
- Provide a context that requires dividing two integers.
- Model the process of multiplying two integers using concrete materials or pictorial representations and record the process.
- Model the process of dividing an integer by an integer using concrete materials or pictorial representations and record the process.
- Solve a given problem involving the division of integers (2-digit by 1-digit) without the use of technology.
- Solve a given problem involving the division of integers (2-digit by 2-digit) with the use of technology.
- Generalize and apply a rule for determining the sign of the product and quotient of integers.
- Solve a given problem involving integers taking into consideration order of operations.
### Grade 8
**Strand:** Patterns and Relations (Patterns)

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use patterns to describe the world and solve problems.</td>
<td>The following set of indicators <em>may</em> be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. Graph and analyze two-variable linear relations.  
   [C, ME, PS, R, T, V]

   - Determine the missing value in an ordered pair for a given equation.
   - Create a table of values by substituting values for a variable in the equation of a given linear relation.
   - Construct a graph from the equation of a given linear relation (limited to discrete data).
   - Describe the relationship between the variables of a given graph.
### Grade 8
**Strand:** Patterns and Relations  
(Variables and Equations)

<table>

| 1. Develop and apply the Pythagorean theorem to solve problems. [CN, PS, R, T, V] | ✓ Model and explain the Pythagorean theorem concretely, pictorially or using technology.  
✓ Explain, using examples, that the Pythagorean theorem applies only to right triangles.  
✓ Determine whether or not a given triangle is a right triangle by applying the Pythagorean theorem.  
✓ Determine the measure of the third side of a right triangle, given the measures of the other two sides, to solve a given problem.  
✓ Solve a given problem that involves Pythagorean triples, e.g., 3, 4, 5 or 5, 12, 13. |
| 2. Draw and construct nets for 3-D objects. [C, CN, PS, V] | ✓ Match a given net to the 3-D object it represents.  
✓ Construct a 3-D object from a given net.  
✓ Draw nets for a given right circular cylinder, right rectangular prism and right triangular prism, and verify by constructing the 3-D objects from the nets.  
✓ Predict 3-D objects that can be created from a given net and verify the prediction. |
| 3. Determine the surface area of:  
- right rectangular prisms  
- right triangular prisms  
- right cylinders  
to solve problems. [C, CN, PS, R, V] | ✓ Explain, using examples, the relationship between the area of 2-D shapes and the surface area of a given 3-D object.  
✓ Identify all the faces of a given prism, including right rectangular and right triangular prisms.  
✓ Describe and apply strategies for determining the surface area of a given right rectangular or right triangular prism.  
✓ Describe and apply strategies for determining the surface area of a given right cylinder.  
✓ Solve a given problem involving surface area. |
### Grade 8

- **5.** Draw and interpret top, front and side views of 3-D objects composed of right rectangular prisms.
  
  [C, CN, R, T, V]

  - Draw and label the top, front and side views for a given 3-D object on isometric dot paper.
  - Compare different views of a given 3-D object to the object.
  - Predict the top, front and side views that will result from a described rotation (limited to multiples of 90 degrees) and verify predictions.
  - Draw and label the top, front and side views that result from a given rotation (limited to multiples of 90 degrees).
  - Build a 3-D block object, given the top, front and side views, with or without the use of technology.
  - Sketch and label the top, front and side views of a 3-D object in the environment with or without the use of technology.

**General Outcome:** Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.
**Grade 8**  
**Strand:** Shape and Space (Transformations)

**General Outcome:** Describe and analyze position and motion of objects and shapes.

**Specific Outcomes**  
*It is expected that students will:*

6. Demonstrate an understanding of tessellation by:
   - explaining the properties of shapes that make tessellating possible
   - creating tessellations
   - identifying tessellations in the environment.
   
   [C, CN, PS, T, V]

**Achievement Indicators**

The following set of indicators *may* be used to determine whether students have met the corresponding specific outcome.

- Identify, in a given set of regular polygons, those shapes and combinations of shapes that will tessellate, and use angle measurements to justify choices, e.g., squares, regular n-gons.
- Identify, in a given set of irregular polygons, those shapes and combinations of shapes that will tessellate, and use angle measurements to justify choices.
- Identify a translation, reflection or rotation in a given tessellation.
- Identify a combination of transformations in a given tessellation.
- Create a tessellation using one or more 2-D shapes, and describe the tessellation in terms of transformations and conservation of area.
- Create a new tessellating shape (polygon or non-polygon) by transforming a portion of a given tessellating polygon, e.g., one by M. C. Escher, and describe the resulting tessellation in terms of transformations and conservation of area.
- Identify and describe tessellations in the environment.

**1. Demonstrate an understanding of powers with integral bases (excluding base 0) and whole number exponents by:**
- representing repeated multiplication using powers
- using patterns to show that a power with an exponent of zero is equal to one
- solving problems involving powers.

[C, CN, PS, R]

**2. Demonstrate an understanding of operations on powers with integral bases (excluding base 0) and whole number exponents.**

[C, CN, PS, R, T]

<table>
<thead>
<tr>
<th>Achievement Indicators</th>
</tr>
</thead>
</table>

- Explain, using repeated multiplication, the difference between two given powers in which the exponent and base are interchanged, e.g., $10^3$ and $3^{10}$.
- Express a given power as a repeated multiplication.
- Express a given repeated multiplication as a power.
- Explain the role of parentheses in powers by evaluating a given set of powers, e.g., $(-2)^4$, $(-2^4)$ and $-2^4$.
- Demonstrate, using patterns, that $a^0$ is equal to 1 for a given value of $a$ ($a \neq 0$).
- Evaluate powers with integral bases (excluding base 0) and whole number exponents.

- $(a^m)(a^n) = a^{m+n}$
- $a^m + a^n = a^{m-n}, m > n$
- $(a^m)^n = a^{mn}$
- $(ab)^m = a^m b^n$
- $\left( \frac{a}{b} \right)^n = \frac{a^n}{b^n}, b \neq 0$.

- Evaluate a given expression by applying the exponent laws.
- Determine the sum of two given powers, e.g., $5^2 + 5^3$, and record the process.
- Determine the difference of two given powers, e.g., $4^3 - 4^2$, and record the process.
- Identify the error(s) in a given simplification of an expression involving powers.

3. Model and solve problems using linear equations of the form:
   - \( ax = b \)
   - \( \frac{x}{a} = b, \ a \neq 0 \)
   - \( ax + b = c \)
   - \( \frac{x}{a} + b = c, \ a \neq 0 \)
   - \( ax = b + cx \)
   - \( a(x + b) = c \)
   - \( ax + b = cx + d \)
   - \( a(bx + c) = d(ex + f) \)
   - \( \frac{a}{x} = b, \ x \neq 0 \)

where \( a, b, c, d, e \) and \( f \) are rational numbers.  
[C, CN, PS, V]

- Model the solution of a given linear equation using concrete or pictorial representations, and record the process.
- Determine, by substitution, whether a given rational number is a solution to a given linear equation.
- Solve a given linear equation symbolically.
- Identify and correct an error in a given incorrect solution of a linear equation.
- Represent a given problem using a linear equation.
- Solve a given problem using a linear equation and record the process.

**General Outcome:** Represent algebraic expressions in multiple ways.
### General Outcome: Represent algebraic expressions in multiple ways.

Grade 9  
**Strand:** Shape and Space (Measurement)  

### General Outcome:
Use direct or indirect measurement to solve problems.

### Specific Outcomes
*It is expected that students will:*

1. Solve problems and justify the solution strategy using circle properties including:
   - the perpendicular from the centre of a circle to a chord bisects the chord
   - the measure of the central angle is equal to twice the measure of the inscribed angle subtended by the same arc
   - the inscribed angles subtended by the same arc are congruent
   - a tangent to a circle is perpendicular to the radius at the point of tangency.

   [C, CN, PS, R, T, V]

### Achievement Indicators
*The following set of indicators may be used to determine whether students have met the corresponding specific outcome.*

- Provide an example that illustrates:
  - the perpendicular from the centre of a circle to a chord bisects the chord
  - the measure of the central angle is equal to twice the measure of the inscribed angle subtended by the same arc
  - the inscribed angles subtended by the same arc are congruent
  - a tangent to a circle is perpendicular to the radius at the point of tangency.

- Solve a given problem involving application of one or more of the circle properties.
- Determine the measure of a given angle inscribed in a semicircle using the circle properties.
- Explain the relationship among the centre of a circle, a chord and the perpendicular bisector of the chord.
Grade 9

</table>

2. Determine the surface area of composite 3-D objects to solve problems. [C, CN, PS, R, V]

- Determine the area of overlap in a given concrete composite 3-D object, and explain its effect on determining the surface area (limited to right cylinders, right rectangular prisms and right triangular prisms).
- Determine the surface area of a given concrete composite 3-D object (limited to right cylinders, right rectangular prisms and right triangular prisms).
- Solve a given problem involving surface area.

3. Demonstrate an understanding of similarity of polygons. [C, CN, PS, R, V]

- Determine if the polygons in a given pre-sorted set are similar and explain the reasoning.
- Draw a polygon similar to a given polygon and explain why the two are similar.
- Solve a given problem using the properties of similar polygons.
### Grade 9
**Strand:** Shape and Space (Transformations)

<table>
<thead>
<tr>

4. **Draw and interpret scale diagrams of 2-D shapes.**
   - [CN, R, T, V]

   - Identify an example in print and electronic media, e.g., newspapers, the Internet, of a scale diagram and interpret the scale factor.
   - Draw a diagram to scale that represents an enlargement or reduction of a given 2-D shape.
   - Determine the scale factor for a given diagram drawn to scale.
   - Determine if a given diagram is proportional to the original 2-D shape and, if it is, state the scale factor.
   - Solve a given problem that involves a scale diagram by apply the properties of similar triangles.
<table>

<td>Strand: Shape and Space (Transformations) (continued)</td>
<td>5. Demonstrate an understanding of line and rotation symmetry. [C, CN, PS, V]</td>
</tr>
<tr>
<td></td>
<td>- Classify a given set of 2-D shapes or designs according to the number of lines of symmetry.</td>
</tr>
<tr>
<td></td>
<td>- Complete a 2-D shape or design given one half of the shape or design and a line of symmetry.</td>
</tr>
<tr>
<td></td>
<td>- Determine if a given 2-D shape or design has rotation symmetry about the point at the centre of the shape or design and, if it does, state the order and angle of rotation.</td>
</tr>
<tr>
<td></td>
<td>- Rotate a given 2-D shape about a vertex and draw the resulting image.</td>
</tr>
<tr>
<td></td>
<td>- Identify a line of symmetry or the order and angle of rotation symmetry in a given tessellation.</td>
</tr>
<tr>
<td></td>
<td>- Identify the type of symmetry that arises from a given transformation on the Cartesian plane.</td>
</tr>
<tr>
<td></td>
<td>- Complete, concretely or pictorially, a given transformation of a 2-D shape on a Cartesian plane, record the coordinates and describe the type of symmetry that results.</td>
</tr>
<tr>
<td></td>
<td>- Identify and describe the types of symmetry created in a given piece of artwork.</td>
</tr>
<tr>
<td></td>
<td>- Determine whether or not two given 2-D shapes on the Cartesian plane are related by either rotation or line symmetry.</td>
</tr>
<tr>
<td></td>
<td>- Draw, on a Cartesian plane, the translation image of a given shape using a given translation rule, such as R2, U3 or $\rightarrow$, $\uparrow\uparrow\uparrow$, label each vertex and its corresponding ordered pair and describe why the translation does not result in line or rotation symmetry.</td>
</tr>
<tr>
<td></td>
<td>- Create or provide a piece of artwork that demonstrates line and rotation symmetry, and identify the line(s) of symmetry and the order and angle of rotation.</td>
</tr>
</tbody>
</table>
### Grade 9

**Strand:** Statistics and Probability  
(Data Analysis)

**General Outcome:** Collect, display and analyze data to solve problems.

<table>
<thead>
<tr>
<th>Specific Outcomes</th>
<th>Achievement Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is expected that students will:</td>
<td>The following set of indicators may be used to determine whether students have met the corresponding specific outcome.</td>
</tr>
</tbody>
</table>

1. **Describe the effect of:**  
   - bias  
   - use of language  
   - ethics  
   - cost  
   - time and timing  
   - privacy  
   - cultural sensitivity on the collection of data.  
   [C, CN, R, T]
   - Analyze a given case study of data collection, and identify potential problems related to bias, use of language, ethics, cost, time and timing, privacy or cultural sensitivity.  
   - Provide examples to illustrate how bias, use of language, ethics, cost, time and timing, privacy or cultural sensitivity may influence the data.

2. **Select and defend the choice of using either a population or a sample of a population to answer a question.**  
   [C, CN, PS, R]
   - Identify whether a given situation represents the use of a sample or a population.  
   - Provide an example of a situation in which a population may be used to answer a question and justify the choice.  
   - Provide an example of a question where a limitation precludes the use of a population and describe the limitation, e.g., too costly, not enough time, limited resources.  
   - Identify and critique a given example in which a generalization from a sample of a population may or may not be valid for the population.
### Grade 9

**Strand:** Statistics and Probability  
(Data Analysis) (continued)

| 3. Develop and implement a project plan for the collection, display and analysis of data by:  
  • formulating a question for investigation  
  • choosing a data collection method that includes social considerations  
  • selecting a population or a sample  
  • collecting the data  
  • displaying the collected data in an appropriate manner  
  • drawing conclusions to answer the question.  
  [C, PS, R, T, V] |  
|---|---|
| ➢ Create a rubric to assess a project that includes the assessment of:  
  • a question for investigation  
  • the choice of a data collection method that includes social considerations  
  • the selection of a population or a sample and justifying the choice  
  • the display of the collected data  
  • the conclusions to answer the question.  
| ➢ Develop a project plan that describes:  
  • a question for investigation  
  • the method of data collection that includes social considerations  
  • the method for selecting a population or a sample  
  • the method to be used for collection of the data  
  • the methods for analysis and display of the data.  
| ➢ Complete the project according to the plan, draw conclusions and communicate findings to an audience.  
| ➢ Self-assess the completed project by apply the rubric.  
| General Outcome: Collect, display and analyze data to solve problems. |
### Grade 9

</tr>
</tbody>
</table>

4. Demonstrate an understanding of the role of probability in society.  
   [C, CN, R, T]

- Provide an example from print and electronic media, e.g., newspapers, the Internet, where probability is used.
- Identify the assumptions associated with a given probability and explain the limitations of each assumption.
- Explain how a single probability can be used to support opposing positions.
- Explain, using examples, how decisions based on probability may be a combination of theoretical probability, experimental probability and subjective judgment.
